Introduction to ACS150

ABB micro drives

ACS150 variable frequency drives feature an integrated control panel with LCD display and built-in speed potentiometer. For easy setup and commissioning, the drives include a variety of predefined I/O configuration macros including: ABB standard, 3-wire control, Digital input control, PID control, Hand/Auto control, and a PLC interface. User defined macros can also be created. The ACS150 drive has an extensive list of programmable drive parameters that are used to achieve high performance with maximum versatility in many applications.

ACS150 micro drives are compact with multiple mounting positions and options. The built-in DIN rail mounting capability makes them ideal for panel builders. Rapid programming and commissioning are possible using the on board setup macros. The DrivePM (Drive Parameter Manager) software tool can be used to create, edit, and copy parameter sets using the MFDT-01 FlashDrop tool.

Flashdrop, an optional drive configuration tool, can be used to quickly and easily configure spares or large volumes of unpowered drives using the connection port on the front panel. FlashDrop stores up to 20 different parameter sets and can copy parameters from one drive to another, or between a PC and a drive.

The ACS150 drive is ideal for panel builders and OEM's needing a micro drive with low cost, flexible mounting options, and rapid parameter setup.

Highlights

- Power range: 0.50 to 5 Hp, single and three phase input
- 150% peak overload capacity
- Worldwide availability and support
- User-friendly control panel with LCD display and integrated potentiometer
- Multiple mounting positions
- PID control
- Integrated 2nd environment EMC filter with disconnect option
- Built-in brake chopper
- Flashdrop tool for fast commissioning
- Conformally coated boards
- Common height and depth across the product line, for flexible installation
- Wall or DIN rail mountable
- Easy access to power and I/O connections for rapid installation
- Selection options for input reactors, output filters, & braking resistors
- UL listing includes use of ABB manual motor protectors for branch circuit protection instead of fuses

Feature	Advantage	Benefit
Worldwide availability and service	Drives are available worldwide and permanently stocked in four regions. Dedicated global service and support network that is one of the widest in the industry.	Fast and reliable delivery with dedicated support to any country in the world.
User-friendly LCD control panel and integrated potentiometer	Clear alphanumeric display. Easy setup and use.	Time savings due to quick setup and simple configuration.
Flexible mounting alternatives	Screw or DIN rail mounting, sideways or side-by-side.	One drive type can be used in various designs, saving installation costs and time.
Integrated EMC filter	High electromagnetic compatibility.	Low EMC emissions in selected environments.
Built-in brake chopper as standard	No need for an external brake chopper.	Space savings, reduced installation cost.
FlashDrop tool	Faster and easier drive setup and commissioning for volume manufacturing and maintenance. The FlashDrop tool enables both downloading and uploading drive parameters.	Fast, safe and trouble-free parameter setting without the need to power-up the drive. Patented.
PID control	Varies the drive's performance according to the need of the application.	Enhances production output, stability and accuracy.
Coated boards	Board coating protects the electronics from hazards including static discharge and airborne contaminates, including moisture.	Reduces maintenance due to good protection of electronics components.

Easily integrated drives for a wide range of applications

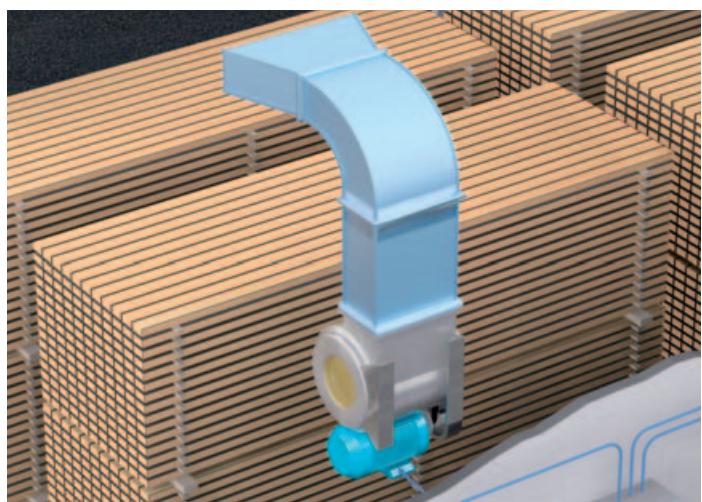

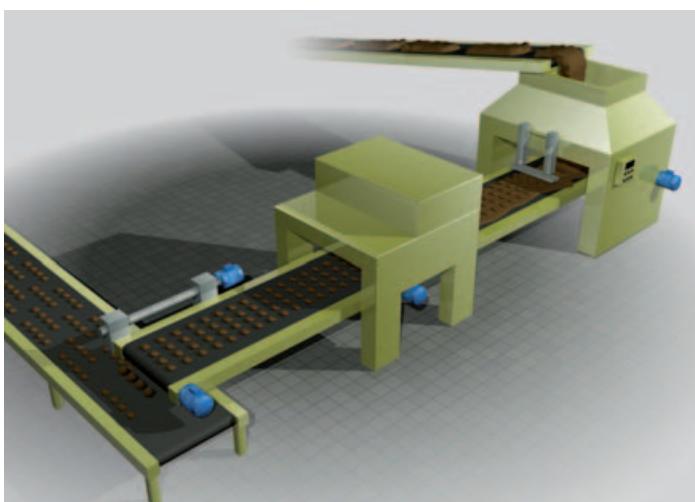

ABB micro drives bring speed control benefits to a wide variety of applications.

In mixing applications the drive provides high starting torque which benefits the start of the mixing operation. The silent operation mode adjusts the switching frequency of the drive to a higher level after the high-torque start, resulting in lower audible noise. The FlashDrop tool provides a quick and safe way to configure multiple drives for identical mixer applications.

In conveyors the belt speed can be controlled using a drive and a motor. Production lines often have multiple stages, including conveyors, which need to be efficiently linked with each other to provide high production output. A drive provides smooth start and stop of the conveyor, thereby reducing mechanical stress and lowering maintenance costs.

A heat pump system consists of an indoor unit with fan and an outdoor unit with a compressor and a blower. The heat pump cools indoor environment by gathering heat from the air, and transferring the heat outside. The outdoor unit uses the compressor and the blower to dissipate the heat. The cooled air is blown indoors by fans located in the indoor unit. Drive allows the user to variably control the cooling power based on customer request. AC drives optimizes systems' energy efficiency and smoothens system operation.

Fans are used for process cooling and ventilation in industrial, commercial and domestic environments. Using a drive to control air flow enables energy savings compared to mechanical flow control methods. An ABB drive has integrated PID control which provides optimal air flow by adjusting the fan speed based on a given reference value. Compact size and various mounting methods enable flexible system design.

Ratings, types and dimensions

Type designation

In column 4 on the right is the unique reference number that clearly identifies your drive by power rating and frame size. Once you have selected the type designation, the frame size (column 5) can be used to determine the drives dimensions, shown below.

Voltages

ACS150 is available in two voltage ranges:

2 = 200 to 240 V

4 = 380 to 480 V

Insert either "2" or "4", depending on your chosen voltage, into the type designation shown on the right.

Construction

The second portion of the type designation – "01U" or "03U" – describes the input voltage and status of the built-in EMC filter:

01 = Single phase input

03 = Three phase input

U = EMC filter installed but disconnected. This is the standard configuration for drives stocked in the U.S. The "U" indicates that a plastic screw has been inserted in the "EMC" location on the side of the drive. To ground the EMC filter and make it active, remove the plastic screw and replace it with the metal screw provided in the parts bag.

Cabinet-mounted drives (UL open)

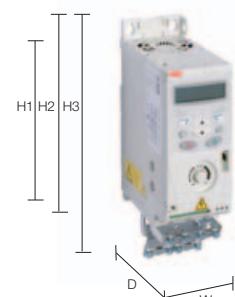

Frame size	IP20 UL open											
	H1 in mm	H1 in mm	H3 in mm	W in mm	D in mm	Weight lb kg

Environmental limits			
Ambient temperature	14 to 104 °F (-10 to 40 °C), no frost allowed, 122 °F (50 °C) with 10% derating		
Altitude Output current	Rated current available at 0 to 3281 ft (0 to 1000 m) reduced by 1% per 328 ft (100 m) over 3281 to 6562 ft (1000 to 2000 m)		
Relative humidity	Lower than 95% (without condensation)		
Degree of protection	IP20/Optional NEMA 1 enclosure		
Enclosure colour	NCS 1502-Y, RAL 9002, PMS 420 C		
Contamination levels	IEC 721-3-3		
Transportation	No conductive dust allowed		
	Class 1C2 (chemical gases)		
	Class 1S2 (solid particles)		
Storage	Class 2C2 (chemical gases)		
	Class 2S2 (solid particles)		
Operation	Class 3C2 (chemical gases)		
	Class 3S2 (solid particles)		
Input reactor and output filter			
AC input reactor	External option. For reducing THD in partial loads and to comply with EN 61000-3-2.		
dv/dt output filter	External option. For use with longer motor cables		

Control connections and interfaces

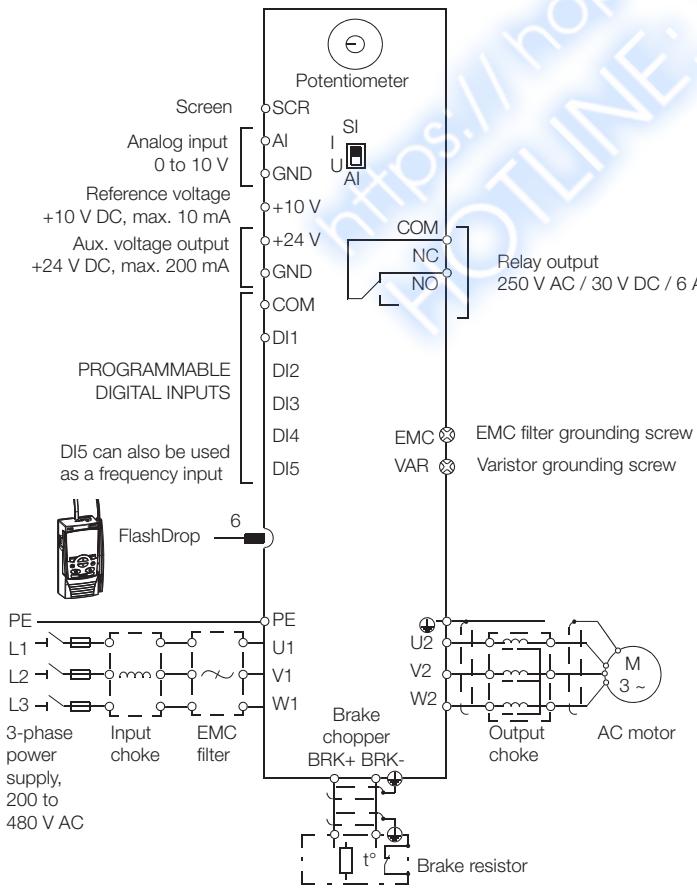

Application macros

Application macros are preprogrammed parameter sets. When starting up the drive, the user typically selects one of the macros that is best suited for the application. The diagram below gives an overview of ACS150 control connections and shows the default I/O connections for the ABB standard macro.

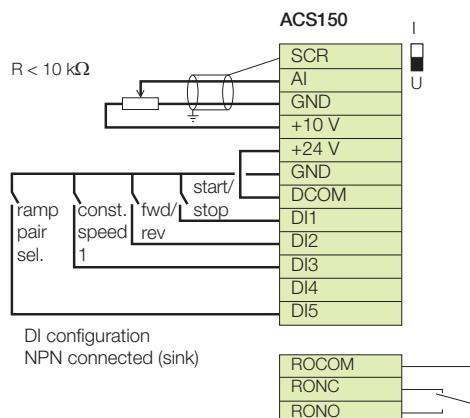

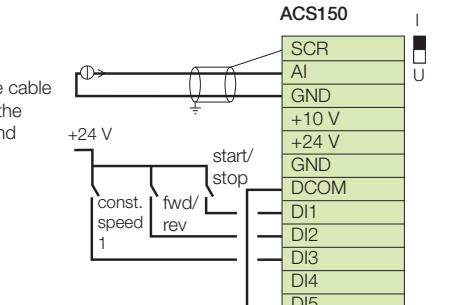

ABB micro drives have six standard macros:

- ABB standard macro
- 3-wire macro
- Alternate macro
- Motor potentiometer macro
- Hand/auto macro
- PID control macro

In addition to the standard macros the user can create three user macros. The user macro allows the user to save the parameter settings for later use.

Typical I/O connections

Cooling

Cooling

ACS150 drives in frame sizes R1 & R2 include cooling fans as standard. The R0 frame size drives do not have an internal cooling fan and rely on natural convection to cool the internal components. The cooling air must be free from corrosive substances, excessive moisture, dust, and dirt.

If the ambient air exceeds the maximum rated ambient of 40 °C, the output amps of the drive must be de-rated. This derating is 1% of the rated output amps for every 1 °C above 40°C to a maximum of 50 °C. (See the Technical data – Environmental limits section of this catalog or the User Manual.)

For locations where the ambient could exceed 50 °C, the drive should be mounted in a properly sized enclosure with additional cooling provided.

Cooling air flow

Type designation	Frame size	Heat dissipation		Air flow

Fuses and Circuit Protection

Fuses or manual motor protectors for circuit protection

Standard fuses or manual motor protectors can be used with ACS150 drives for branch circuit protection.

Use the following table for selecting the correct fuse or protector for each drive.

Manual motor protectors

ABB UL file E211945 Volume 1, Section 4 lists the ABB Type E manual motor protectors MS132 & S1-M3-25, MS451-xxE, MS495-xxE as an alternate to UL classified fuses as a means of branch circuit protection. This is in accordance with the National Electrical Code (NEC).

When the correct ABB Type E manual motor protector is selected from the table and used for branch circuit protection the drive is suitable for use in a circuit capable of delivering not more than 65 kA RMS symmetrical amperes at the drive maximum rated voltage.

Drives with and without NEMA 1 enclosure kits are included in the UL file. The MMP selections in the table are also valid for drives having a NEMA 1 enclosure kit installed.

Type Code	Frame	IEC fuses	UL fuses	Manual Motor Protectors		
		Fuse Type gG* [A]	UL Class T or CC (600V) [A]	MMP Type E ^{1, 2}	MMP Trip Current Setting [A]	Minimum Enclosure Vol. ⁵ [cu in]
1 Phase 200 to 240 V

ACS150-03U-08A8-4	R1	20	25	MS451-16E	11.3	1152

* According to the IEC-60269 standard

¹⁾ All manual motor protectors listed are Type E self-protected up to 65kA. See ABB publication AC1010 for complete technical data on ABB Type E manual motor protectors.

²⁾ Manual motor protectors may require adjusting the trip limit from the factory setting at or above the drive input Amps to avoid nuisance tripping. If the manual motor protector is set to the maximum current trip level and nuisance tripping is occurring, then select the next size MMP. (MS132-10 is the highest size in MS132 frame size to meet Type E at 65kA; the next size up is the MS451-16E)

³⁾ Requires use of the S1-M3-25 line side feeder terminal with the manual motor protector to meet Type E self-protection class.

⁴⁾ 480Y/277V only

⁵⁾ Minimum enclosure volume is specified in the UL listing for R0 & R1 frame drives when applied with the ABB Type E MMP shown in the table. ACS150 drives are intended to be mounted in an enclosure unless a NEMA 1 kit is added.

For all drives, the enclosure must be sized to accommodate the specific thermal considerations of the application as well as provide free space for cooling. See the applicable ABB User Manual for free space requirements.

To obtain the most current product documentation go to www.abb.com and select Offerings/Low Voltage AC Drives to navigate to the complete User Manual for the appropriate drive.

Options

FlashDrop tool

FlashDrop is a powerful palm sized tool for fast and easy parameter selecting and setting. It gives the possibility to hide selected parameters to protect the machine. Only the parameters needed in the application are shown. The tool can copy parameters between two drives or between a PC and a drive. All the above can be done without a power connection to the drive – in fact, it is not even necessary to unpack the drive.

DrivePM

DrivePM (Drive parameter manager) is a tool to create, edit and copy parameter sets for FlashDrop. For each parameter/group the user has a possibility to hide it, which means that the drive user does not see the parameter/group at all.

DrivePM requirements

- Windows 2000/XP/Vista/Windows 7
- Free serial port from a PC

FlashDrop package includes

- FlashDrop tool
- DrivePM software on a CD-ROM
- User's manual in pdf-format on the previous CD-ROM
- Cable for connection between the PC and FlashDrop
- Battery charger

Protection class NEMA 1

The NEMA 1 kit includes a connection box for finger protection, conduit tube installation, and a hood for protection against dirt and dust.

Brake resistors

ACS150 is delivered with an integrated brake chopper as standard. Therefore no additional space or installation time is needed. The brake resistor is selected using the following pages. For more information about the selection of brake resistors, see the ACS150 user's manual.

Braking Resistors

Brake chopper (transistor)

ACS150 drives include a built-in brake chopper as standard. No assembly of separate option kits need to be selected, no additional panel space is required, or additional installation time is needed to include a brake chopper. Brake resistors are selected using the following tables. Either compact CR

type resistors (for smaller drives) or standard enclosed resistor packages are available. For more information regarding the selection of the braking resistor and the limits of the built-in brake chopper, see the ACS150 User Manual.

Braking Resistors

Information and Dimensions

CR Case Resistors Overview

Powerohm's Type CR resistors are manufactured with quality components for superior performance and increased life expectancy. Our case resistors feature a nickel-chromium wire helically wound, then placed inside a ceramic fixture and inserted into a corrosionresistant aluminum case. Each coil end is terminated to high temperature wire leads and encapsulated with a ceramic pottingmaterial. The result is a resistor element electrically isolated, but thermally bound to the outer case to allow the element heat to transfer to the metallic case and efficiently cool. The units are supplied with 18" wire leads, and the case is machined to include two mounting holes for easy installation.

Electrical Ratings & Dimensions of Standard Size Case Resistors

Wattage	Dimensions (in)				
	A	B	C	D	E
100	6	1-1/2	3/4	5-1/2	3/4
150	9	1-1/2	3/4	8-1/2	3/4
200	6	3	1-1/2	5-1/2	1-1/2
300	9	3	1-1/2	8-1/2	1-1/2
400	12	3	1-1/2	11-1/2	1-1/2

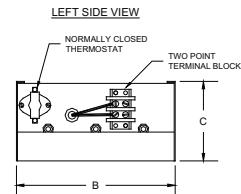

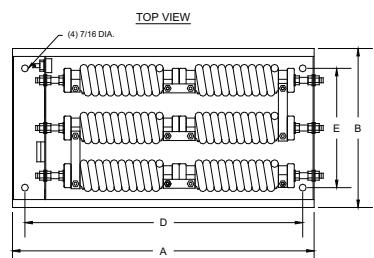

GCE Resistors Overview

The type GCE enclosures are heavy gage screened enclosures featuring a solid bottom and a built-in wiring compartment separated from the resistor assembly. The resistors are factory wired to a terminal block mounted in this compartment using high temperature Teflon or silicone wire. The terminal compartment also houses a normally closed thermal switch used for detecting resistor temperature overloads. During installation, standard 90 °C rated wire is routed into the compartment through the removable 1/2 inch conduit knockouts and connected to the factory wired terminal block.

Our standard unit includes a screened cover which is CNC punched to obtain maximum cooling and professional aesthetics. Mounting holes are located inside the enclosure and can be easily accessed by removing the cover. Resistor coils are interconnected using stainless steel bus bars, producing a corrosion resistant current path to withstand nearly any harsh industrial environment. The standard finish is galvanized, but an optional powder coated, aluminum or stainless steel finish is available upon request. As shown in the table below, the size of the enclosure will vary depending on the number of resistor coils required for your application. Units are available with louvered covers; add "-W" to the part number and note that the 'A' and 'B' dimensions will increase by an inch. Please do not hesitate to call the factory if you need assistance.

GCE Enclosure Dimensions and Coil Options

Part No.	Max. No. WR Code	Max. No. SXR, VR or ER	Dimensions (in)				
			A	B	C	D	E
GCE1	1	(1) Size 2	12	5	5	10-1/2	---
GCE2	2	(2) Size 2	12	7	5	10-1/2	4-1/2
GCE3	3	(3) Size 2	12	10	5	10-1/2	7-1/2

Input Reactors

Applications

Line side power conditioning for AC motor controls to prevent unwanted harmonics and nuisance drive trips as well as to prevent excess current during line disturbances that can damage power semi-conductors. There should be a minimum impedance associated with the drive using either AC or DC magnetics. In many applications, this impedance can come from a supply transformer, or if long enough, the supply cable themselves. In most cases, however, the use of an additional input reactor is recommended.

If any of the following conditions exist use of at least a 3% line reactor is recommended:

- Installation has voltage spikes in excess of 6000 V peak or lightning strikes.
- Installation has switched power factor correction capacitors.
- Installation has power interruptions or voltage sags in excess of 200 V AC.
- When the distribution system kVA is more than 10 times larger than the drive kVA.

Features

Open, UL Type 1 and UL Type 3R construction with connection terminals. 3% or 5% impedance rating at rated current.

dv/dt Output Filters

Applications

V1k Output Filters provide motor protection by limiting voltage spikes to 1,000 volts, or below, for long motor cable applications. Greatly extends the life of the motor and cable for all applications up to 1000 feet. For multi-motor applications note that motor lead length is cumulative and the 1000 foot limit still applies. 30% reduction in common mode current enough.

Features

UL Open, UL Type 1 and UL Type 3R construction with connection terminals.

Note: The drives internal EMC filter must remain disconnected when using these filters. When applying these output filters the drive output frequency is limited to 60 Hz.

Expertise at every stage of the value chain

Whether you operate in industry, commerce or a utility your aims remain the same: to keep your motor-driven applications running consistently and efficiently. The life cycle services for ABB drives can help you achieve these aims by maximizing the uptime of your process while ensuring the optimum lifetime of ABB drives in a predictable, safe and low-cost manner.

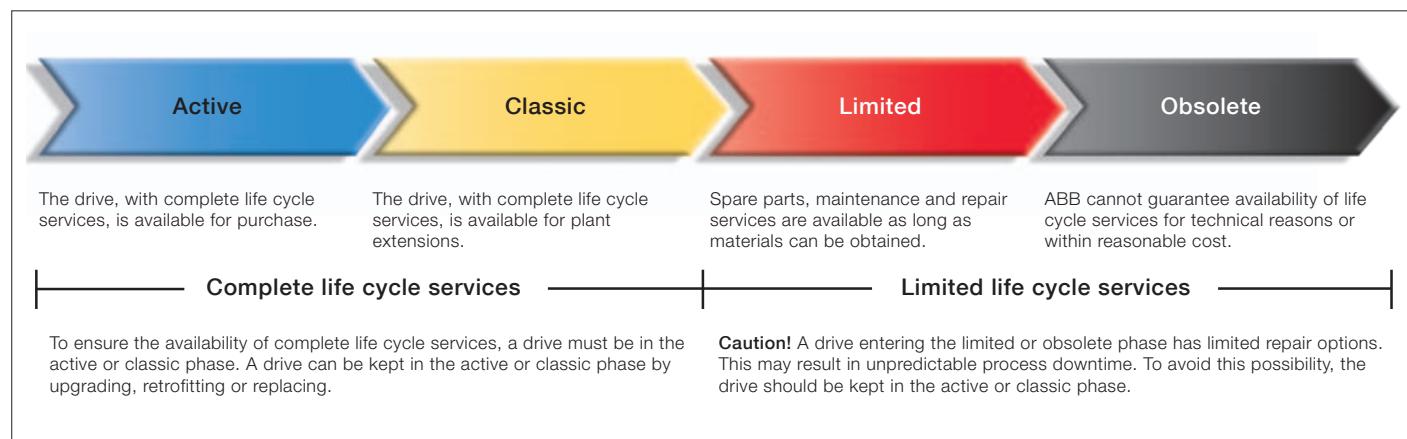

The life cycle services for ABB drives span the entire value chain, from the moment you make the first enquiry about a drive through to its disposal and recycling. Throughout the value chain, ABB provides training and learning, technical support and contracts. All of this is supported by one of the most extensive global drive sales and service networks.

Secure uptime throughout the drive life cycle

ABB follows a four-phase model for the life cycle management of its drives. The life cycle phases are active, classic, limited and obsolete. Within each phase, every drive series has a defined set of services.

The four-phase drive life cycle management model provides you with a transparent method for managing your investment in drives. In each phase, you clearly see what life cycle services are available, and more importantly, what services are not available. Decisions on upgrading, retrofitting or replacing drives can be made with confidence.

ABB drive life cycle management model
