

IEC/EN 60947-2, GB 14048.2, UL1077 (Supplementary Protector TC 3)

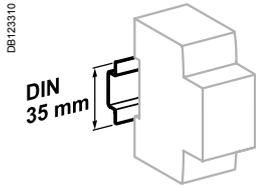

CE

The C60H-DC supplementary protectors are used in direct current circuits (Industrial control and automations, transport, renewable energy...). They combine the following functions of circuit protection against short-circuit and overload currents, control and isolation.

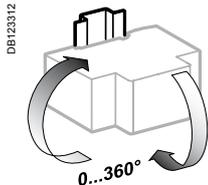

Catalogue numbers

C60H-DC			
Operating voltage (Ue)	12...250 V DC		12...500 V DC
Rated voltage (Un)	250 V DC		500 V DC
Number of poles	1P		2P
Curve	C		C
Number of modules of 9 mm	2		4

* At 25°C / 77°F see temperature derating module 92515.

Clip on DIN rail 35 mm.

Indifferent position of installation.

Details of minimum distance between circuit-breaker and earthed metal parts for circuit-breaker intended for use without enclosure.

Technical data

- Tripping curves: C curve - Overcurrent protection for any type of application.
- Positive break indication - the green strip indicates that all the poles are open and allows work to be carried out on the downstream circuit in complete safety.
- Suitable for isolation as defined in IEC / EN 60947-2.
- Increase in the service life of the product: thanks to fast closure independent of the speed of action on the handle.
- Current limitation in the event of a fault: fast opening of the contacts prevents the loads from being destroyed in the event of a short-circuit.

Main characteristics	
Rated service breaking capacity (Ics)	75 % of the ultimate breaking capacity (Icu)
Power loss	See module 92517
Magnetic tripping (Ii)	8.5 In (± 20 %) (compatible with curve C)
Rated impulse withstand voltage (Uimp) under frame	6 kV
Insulation voltage (Ui)	500 V DC
Endurance (O-C)	
Electrical	3,000 cycles (where L/R=2 ms) 6,000 cycles where the circuit is resistive
Mechanical	20,000 cycles
Additional characteristics	
Pollution degree	3
Utilization category	A (no delay in accordance with IEC/EN 60947-2 standards)
Tropicalization (IEC 60068-2 and GB 14048.2)	Relative humidity: 95 % at 55°C / 131°F
Operating temperature	-25°C to 70°C / -13°F to 158°F
Storage temperature	-40°C to 85°C / -40°F to 185°F

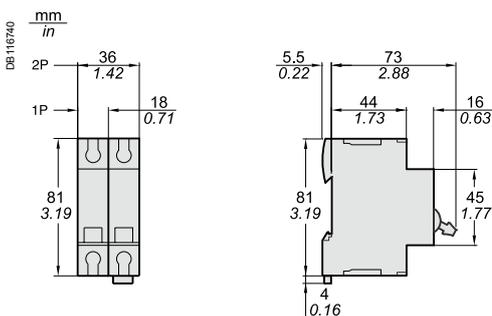

Failure to match polarity during connection may lead to a fire hazard and/or serious injury.

- The connection polarity must be observed (marked on the front panel).
- Use only with direct current.
- If two poles are used in series for the American network, use at least a 12 inch / 30 cm cable.

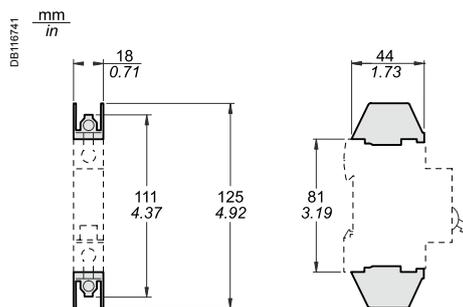

Weight (g)

Circuit-breaker	
Type	C60H-DC
1P	128 g / 4.51 oz
2P	256 g / 9.03 oz

Dimensions (mm/in)

Fault analysis (low earth connection resistance)			
Fault A	<ul style="list-style-type: none"> Isc maximum at U Only protected polarity concerned All the poles of the protected polarity must have a breaking capacity ≥ Isc max. at U 	<ul style="list-style-type: none"> Isc maximum at U/2 Only positive polarity concerned All the positive polarity poles must have a breaking capacity ≥ Isc max. at U/2 	<ul style="list-style-type: none"> Not relevant The fault must be indicated by a permanent insulation monitor (PIM) and cleared (IEC/EN 60364)
Fault B	<ul style="list-style-type: none"> Isc maximum at U If one polarity (in this case positive) is protected: all the poles of this polarity must have a breaking capacity ≥ Isc max. at U If two polarities are protected, to ensure isolation: all the protections of the two polarities must have a breaking capacity ≥ Isc max. at U 	<ul style="list-style-type: none"> Isc maximum at U The 2 polarities are concerned All the poles of the two polarities must have a breaking capacity ≥ Isc max. at U 	<ul style="list-style-type: none"> Isc maximum at U The 2 polarities are concerned All the poles of the two polarities must have a breaking capacity ≥ Isc max. at U
Fault C		<ul style="list-style-type: none"> As for fault A All the negative polarity poles must have a breaking capacity ≥ Isc max. at U/2 	<ul style="list-style-type: none"> As for fault A with the same requirements

Curves

Tripping curves

C curve as in standard IEC 60947.2

- The operating range of the magnetic release is as follows between 7 I_n and 10 I_n.
- The curves show the cold thermal tripping limits when poles are charged and the electromagnetic tripping limits with 2 charged poles.
- The curves are used without any derating.

Temperature derating (according to UL 1077/ CSA22.2/ UL489A/ UL489/ IEC 60947-2 standards)

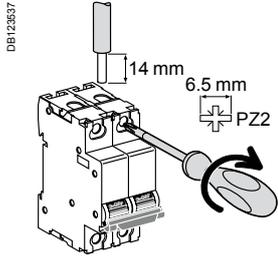

The maximum permissible current in a device depends on the ambient temperature in which it is placed. Ambient temperature is the temperature inside the enclosure or switchboard in which the devices have been installed.

The reference temperature is in the coloured column.

When several simultaneously operating devices are mounted side by side in a small enclosure, the temperature rise inside the enclosure causes a reduction in the current rating. A reduction coefficient of the order of 0.8 must therefore be allocated to the rating (already derated if it depends on the ambient temperature).
