Changes for the Better

MITSUBISHI ELECTRIC

MAGNETIC MOTOR STARTERS
AND MAGNETIC CONTACTORS

MS-N series

Performance with a refined new design and functional beauty

Mitsubishi Electric Corporation Nagoya Works is a factory certified for ISO14001 (standards for environmental management systems) and ISO9001(standards for quality assurance managememt systems)

(Note)
Mark indicating China Compulsory Certification approval.

(Note)
Mark indicating EC Command compliance. Products with CE Mark can be used in Europe.

(Note)
Mark indicating TUV Rheinland Group certification.

(Note)
Mark indicating product UL/CSA certification by Underwriter's Laboratory.

ISO 14001 JACO EC97J1113 UKAS ENVIRONMENTAL MANAGEMENT 051

ISO 9001 BUREAU VERITAS Certification UKAS QUALITY MANAGEMENT 008

Substantial safety and functionality realized with a full lineup

Incorporation of CAN terminal for simple wiring

By adopting a CAN terminal, there is no need to remove the screws, and losing of the terminal screw is prevented by the integrated screw holder and terminal screw. The terminal screw is set in a plastic screw holder. When each pole is moved and the screw loosened, the screw is naturally set in the screw holder. This is Mitsubishi's original CAN terminal. (Patented)
(S-N10CX~N35CX, SD-N11CX~N35CX, SR/SRD-N4CX)

Unified design for N series

The design has been unified for the MS-N series.
The front face of the product is a bright white color, making the inside of the panel brighter and providing a clean image.

Arc space reduced to approx. one-third!

By adopting the new extinguishing mechanism, the arc space has been reduced to approx. 1/3 (Mitsubishi comparison).

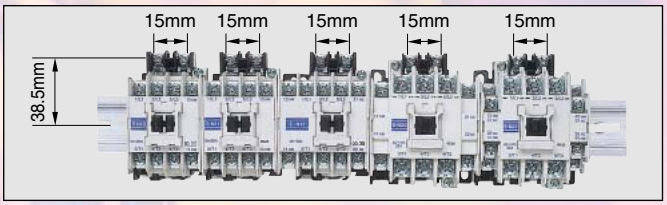
Compatible with International Standards

Most of Mitsubishi's standard products comply with International Standards.
Applicable standards: JIS, JEM, IEC, EN, VDE, BS
Approved standards: UL, CSA, LR, BV, NK, KR, TÜV, GB

Small-Sized Models S-N10~N35

Simple installation and wiring

The MS-N series contactors, starters and relays can be installed on a mounting rail (35mm width). The terminals of these coils are arranged on the contactor with simple wiring. Furthermore, the distance between the center of the rail and the coil terminals is unified at 38.5mm.
(S-N10 to N21, MSO-N10 to N21 and SR-N4)

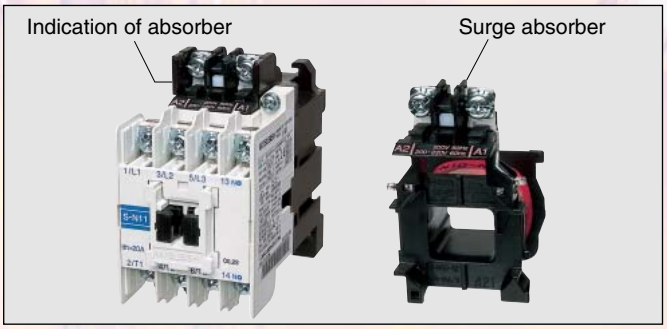


Simple inspections

The contactor can be inspected easily by removing the arc cover.

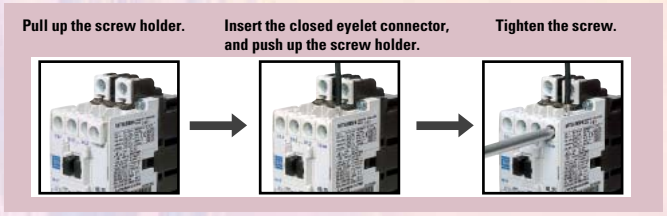
Built-in surge absorber

The model with built-in surge absorber for coils is obtainable as an option.



CAN terminal realizes safety and speedy

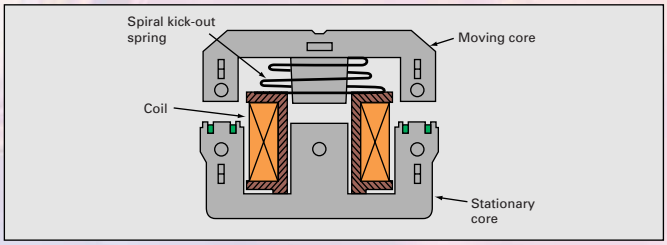
The models with finger protection are safer and speedier even if the lug of a closed type eyelet (ring) terminal plate is used.
(S-N10CX~N35CX, SD-N11CX~N35CX, SR/SRD-N4CX)



Stronger barrier strength is improved with the thermoplastic mold.

Improved magnet

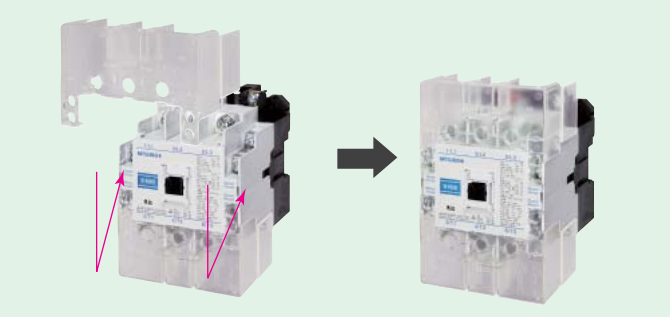
By using a spiral kick-out spring, the dynamic balance of the moving parts is improved, bouncing is reduced, and the core life is extended. Furthermore, the core movement is generally stabilized. The efficient magnet has been achieved through modern technology of the magnet section using a computer. The contactor has a performance to withstand a voltage drop to 35% with the closed contact.



Medium-and Large-Sized Models: S-N50~S-N800

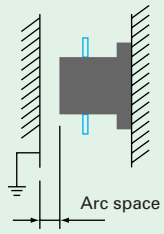
Finger Protection Compatible

An easy-to-install terminal cover, which lays importance on further safety and is compatible with finger protection, has been prepared.



The arc blowoff direction has been changed to further improve safety and space conservation

A new extinguishing structure, which eliminates the blow off of hot gas (arc) to the front (direction to door of control panel) when the current is cutoff has been incorporated.



Frame	Arc space(mm)	
	S-N	S-K
N50/N65	5	10
N80/N95	10	10
N125~N220	10	30
N300/N400	10	50
N600/N800	10	10

In addition to improved safety, the freedom of panel design has been increased allowing space to be saved.

DC Electromagnet with AC Operation (Patented)

Lower Power Consumption

Coil power consumption is greatly low so MS-N Series contactors can be controlled by almost any type of relay, even small output relays of programmable controllers.

Less Noise nor Surge from Coil

When switching a coil, the energy will be desipated within internal circuit of electromagnet

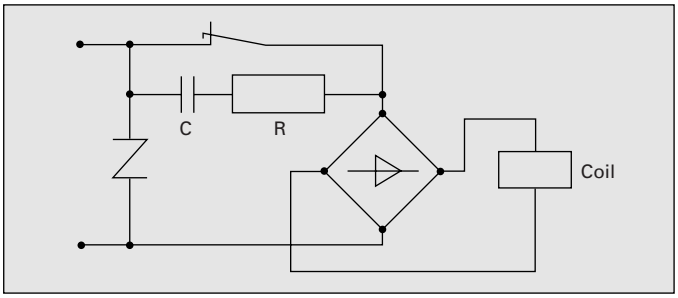
Humming Completely Eliminated

DC excitation does not cause humming so operation is quiet.

Contactor Coils Have Ultra-Wide Range of Ratings

The voltage rating ranges is widened and the coil type are reduced to one-third.

Internal circuit of the electromagnet



MATCH WITH ELECTRONIC CONTROL FOR FACTORY AUTOMATION

One-touch surge absorber

If the magnetic relay coil is opened and closed near an electronic circuit, malfunctioning of the electronic circuit could be induced by a surge voltage. The UN-SA type surge absorber suppresses the surge voltage when this coil is opened and closed. In addition to the general varistor type and the CR type that lays importance on suppressing the induction voltage when starting, the type with operating indicator (varistor type), and the varistor type with CR are available.

Auxiliary contact unit with low level contact

This is an auxiliary contact unit with low level contact, capable of opening and closing the low voltage and minute current of the electronic control circuit. It can be installed with one touch onto the magnetic contactor or magnetic relay that opens and closes the power of the motor, etc. The junction relay for opening and closing the low voltage and minute current is not needed, so this unit is suitable for opening and closing electronic input circuits in programmable logic controllers, etc. A compact microswitch is used for the low level contact, so the unit will not malfunction due to fields and surge voltages from the main circuit current and coil of the magnetic contactor.

A 1NO+1NC low level contacts and 1NO+1NC standard contacts are built-in, so the opening and closing of 200VAC and 24VDC can be handled with one unit.

Interface unit

◆2 types of inputs

The long life no-contact output type (UN-SY21, SY31) and contact output type (UN-SY22, SY32) are available.

◆One touch installation

The UN-SY21, SY22, SY31 and SY32 types can be mounted with one touch onto the coil terminal. Post-installation work is easy.

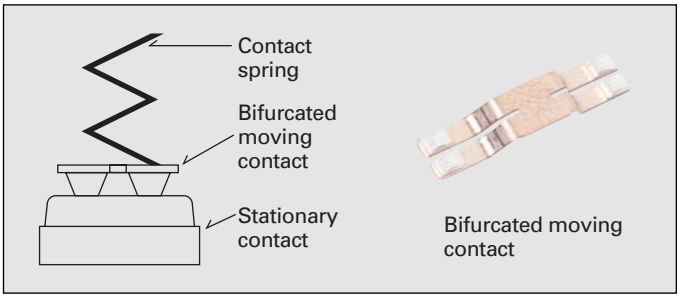
◆Single standalone unit

A single unit installation type (UN-SY11, SY12) is available for the S-KR11 and S-N80 to N400 magnetic contactor.

Direct installation is possible on the following units:
S-N series (Magnetic contactor) 65A frame or less
SR-N series (Magnetic relay) 4-pole, 5-pole and 8-poles types

Even Greater Contact Reliability

Contact reliability has been greatly improved by the bifurcated auxiliary moving contact



CONTENTS

TYPE REFERENCE LIST

1. GENERAL PURPOSE CONTACTORS & STARTERS

Series **MS-N**

1.1 Conformity to International Standards

Mitsubishi magnetic motor starters and contactors are designed to conform to the relevant IEC recommendations and to the standards of as many countries as possible. Specifically, they conform to the following:

IEC60947-4-1	International	VDE0660	Germany
EN60947-4-1	Europe	NEMA-ICS	U.S.A

Notes:1. Standard models are applicable under following conditions.

Main circuits (Main contacts) : AC-3 rated current at 440V AC max. and rated continuous current.
Auxiliary contacts : AC-15 rated current at 550V AC max. and rated continuous current.
Operation coil : AC coil designation
N10~N12, N18~N48 and SR-N4 ; AC12V~AC440V
N20~N35 ; AC12V~AC380V
N50~N150 ; AC24V~AC500V
N180~N400 ; AC48V~AC500V
DC coil designation DC12V~DC220V

2. For contactors, standard models are with TÜV mark on the product.
For other products, standard models are with no TÜV mark on the product.

3. Finger protection type is certified according to DIN VDE 0106 part 100. For finger protection type, order model name followed by suffix "CX".

4. Models with built-in surge absorber (model name followed by "SA") are also certified.

5. Mirror contact function compliance certification has been obtained from TÜV. This product is suitable for use in a machine tool's interlock circuit. The mirror contact function refers to a function in which the auxiliary NC contact can withstand a 2500V impulse voltage without contacting even if the main contact melts.

Solid state contactor (for heater load)

Table 1.1.3 (6)

Model Name		Continuous current rating [A]
Batch control	Individual control	
US-H20(RM)(HZ)	US-H20DD(RM)(HZ)	20
US-H30(RM)	US-H30DD(RM)	30
US-H40	US-H40DD	40
US-H50	US-H50DD	50

Notes: 1. "(HZ)" has no cooling fin. "(RM)" is available rail mounting.

2. The US-H□ (DD) HZ type is certified at the continuous current rating when combined with the fin used on the US-H□ (DD) type.

3. The US-H□ (DD) HZ type is UR certified.

1.1.4 CCC Certified Products

Magnetic motor starters, etc., are designated as products targeted for China Compulsory Certification. CCC certification must be acquired before the product is exported to main land China from Domestic or marketed in China.
The certified models are shown in Tables 1.1.4 (1-1) to 1.1.4 (8-2). The option units (UN-CV, ML, RR, SA, etc.) which are mounted on the magnetic motor starter and which do not have a load switching function are excluded from the CCC certification target.

	Main terminal (overload relay)	mm^2	1-2.5	1-2.5	1-6	1-6	1-6	2-16	2-16	2-25	2-25
Control terminal		mm^2	1-2.5	1-2.5	1-2.5	1-2.5	1-2.5	1-2.5	1-2.5	1-2.5	1-2.5
Busbar width		mm	—	—	—	—	—	—	—	—	—

Notes: 1. 660A at ambient temperature 40-55°C. 2. 800A at ambient temperature 40-55°C.

3. Conductor size in parentheses indicate compression terminal style not for bare clamping.

4. The peak value of inrush current should be less than 2000% of the effective value for rated current of capacitors. The selection is invalid for the circuit of parallel capacitors which are controlled individually.

1.4.2 Performance of Series S-N Contactors

Electrical Life

The electrical life of the main contacts of a contactor is determined mainly by the circuit-opening duty it will perform. The relationship between electrical life and rated current of Mitsubishi contactors under normal and jogging duties of squirrel-cage motors is shown in Fig. 1.4.2(1) and 1.4.2(2). In the case of a mixture of normal and jogging duties, the expected contactor life can be determined as follows:

$$N = Nr/1 + \frac{\alpha}{100}(Nr/N_l - 1) \quad \text{..... Eq.1.1}$$

where N : Life in the case of α% jogging duty
Nr : Life in the case of normal duty
N_l : Life in the case of 100% jogging duty
α : Percentage of jogging duty

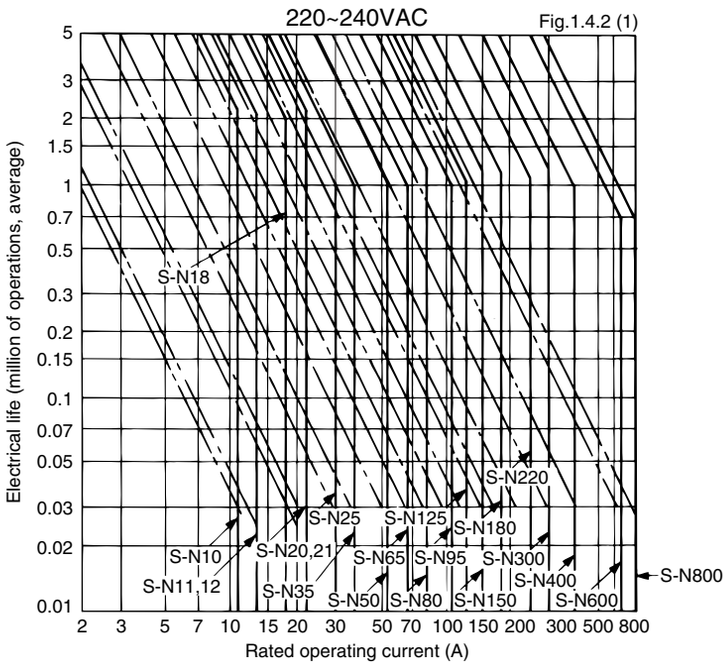

Fig.1.4.2 (1)

Electrical life versus rated operating current

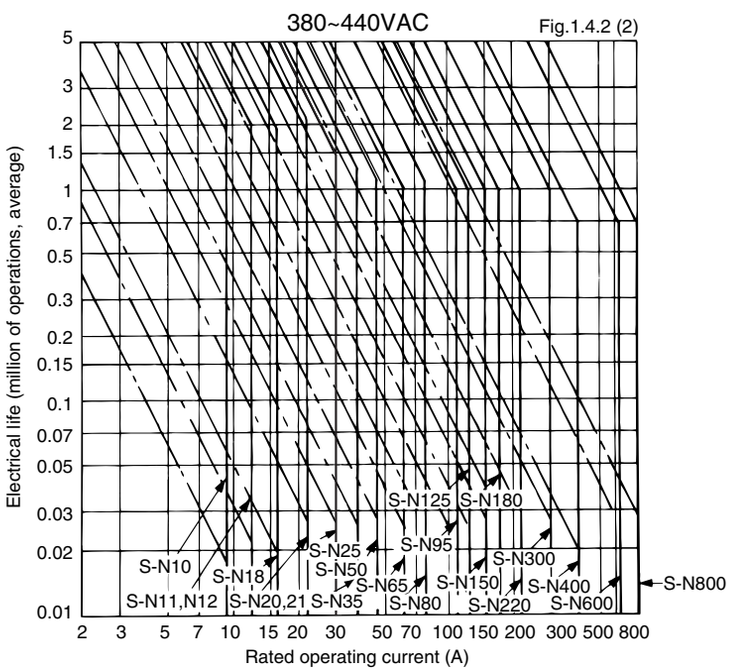

Fig.1.4.2 (2)

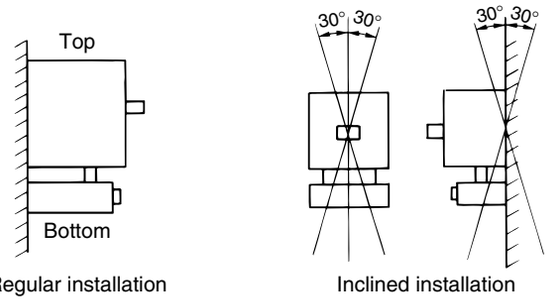
—— Normal duty, 6Ie on, Ie off, on-load factor 40%, 1200 operations/hour (AC3)
– · – Jogging duty, 6Ie on, 6Ie off, on-load factor 7%, 600 operations/hour (AC4)-S-N10~S-N300 300 operations/hour (AC4)-S-N400~S-N600 150 operations/hour (AC4)-S-N800

1.4.3 Mounting Attitude of Starters and Contactors

To assure proper performance, Mitsubishi magnetic motor starters and contactors should be mounted on a vertical supporting surface with the line terminals upwards and the load terminals downwards. The supporting surface may have a maximum inclination of 30° from the vertical in any direction.



Regular installation Inclined installation

1.5 When Ordering

Contactors, indicate the model name and the ordering designation of the coil.

Example: **S-N20** ∗**AC230V** (∗ **2A)**

- (∗ 2A) — Code of arrangement, if special aux. contacts, ref. Table 1.5.4
- AC230V — Ordering designation of the coil
- S-N20 — Model name

Overload relays, indicate the model name and the ordering designation of the heater setting range.

Example: **TH-N400RHKP**∗**250A**

- 250A — Ordering designation of the heater setting range
- TH-N400RHKP — Model name

Motor starters, indicate the model name, heater setting range, main circuit voltage, coil designation.

Example: **MSO-N11KP**∗**6.6A**∗**380V**∗**AC230V**

- AC230V — Ordering designation of the coil
- 380V — Main circuit voltage
- 6.6A — Ordering designation of the heater setting range
- MSO-N11KP — Model name

Note: Mark ∗ indicates a blank space.

Coil Ratings and Ordering Designations

for **S-N10(CX), -N11(CX), -N12(CX), -N18(CX), -N20(CX), -N21(CX), -N25(CX), -N35(CX) and SR-N(CX)**

Ordering designation	Applicable voltage
AC100V	100-127VAC 50/60Hz
AC200V	200-240VAC 50/60Hz
AC300V	260-350VAC 50/60Hz
AC400V	380-440VAC 50/60Hz
AC500V	460-550VAC 50/60Hz
DC24V	24VDC
DC48V	48VDC
DC100V	100-110VDC
DC125V	120-125VDC
DC200V	200-220VDC

• **Precautions**

- Minimum energising time, both for closing and tripping must be set longer than the followings.
  SL(D)-N21 to N220 : 0.3 sec.
  SL(D)-N300 to N800 : 0.5 sec.
- Make sure never to over lap the energising time for closing and tripping.

SL-N35

SL-N150

1.6.4 Reversing Mechanically Latched Contactors

(Components for Automatic Transfer Switches) Type **SL-2xN□, SLD-2xN□, SLxS-N□**

Ordering Designation

• Mechanically latched & mechanically latched contactor
Model name SL-2xN35
Closing coil designation in normal left side[1] AC200V
Tripping coil designation in normal left side[1] DC100V
Closing coil designation in standby right side[1] DC100V
Tripping coil designation in standby right side[1] AC200V

Complete type designation SL-2xN35∗MC1-AC200V∗MT1-DC100V∗MC2-DC100V∗MT2-AC200V

• Mechanically latched & normal contactor
Model name SLxS-N150
Closing coil designation in normal left side[1] AC200V
Tripping coil designation in normal left side[1] AC100V
Coil designation in standby right side[2] AC100V

Complete type designation SLxS-N150∗MC1-AC200V∗MT1-AC100V∗AC100V

Notes: Mark∗indicates a blank space.
1. See Table 1.6.3(2) 2. See Table 1.5.2

Notes: 1. This shows the state when the same power is used for the main circuit and control circuit. The section shown with a solid line is already wired. The sections shown with a dashed line and a two points of chain line must be wired. (Use the wire enclosed with the product for the two points of chain line section.)

2. If the main circuit and control circuit power differ, do not connect a wire between the dashed line 1/L1-OFF button and the wire between the two points of chain line 3/L2-TH95. Wire to the OFF button and TH95 terminal from a different control circuit's power supply.

2. MOTOR PROTECTION RELAYS

2.1 Thermal Overload Relays

TH-N Series Thermal Overload Relays Will Make a Convenience and Safer Systems.

TH-N12

TH-N20

TH-N12CX

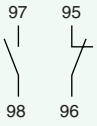
A Selection of Relays for Optimum Motor Protection Characteristics

The thermal relay line-up includes two-element units as well as the phase failure protection type models (three-element relays), all with the same external dimensions.
This array of protection characteristics allows you to choose the units best suited to your motor protection needs.

Maintenance and Inspection Are Easy

An operation indicator makes maintenance and inspection easy. Checks can be performed using manual operations.

1NO + 1NC Contacts



The NO and NC contacts can be used independently as signals contacts.

Rated Current Can Be Set Easily

The value of the rated current is displayed on a dial.
Simply adjust the dial to the full-load current of the motor and motor protection is assured.

Finger Protectors

Models with finger protectors that conform to DIN VDE 0106 Part 100 (TH-N□CX) are also available.

Various Accessories

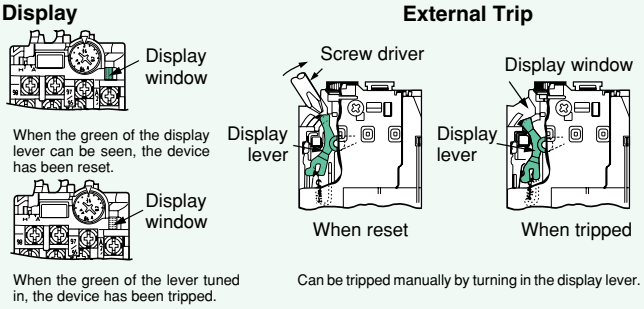
- Independent mount adaptor for TH-N12(CX).
  : UN-HZ12(CX)
- Reset release : UN-RR□□□
- Trip indicating LED : UN-TL□□

Trip-Free Reset Bar

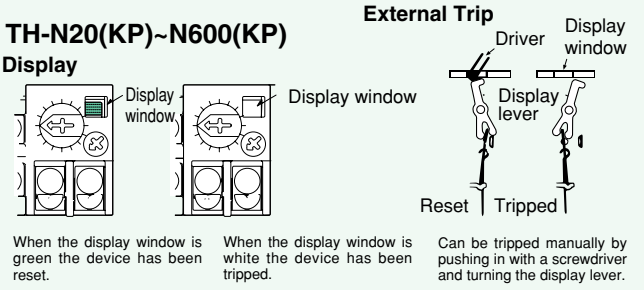
Choose between automatic and manual reset. Also features tripfree reset bar mechanism.

• Display and External Trip Mechanism

TH-N12(KP)/TH-N18(KP)

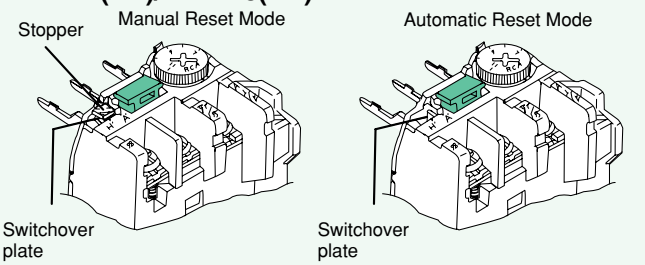


TH-N20(KP)~N600(KP)



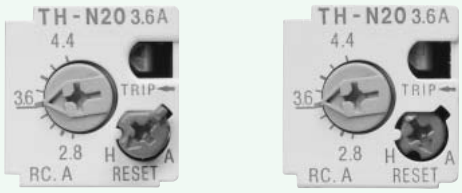
• Switching Between Automatic and Manual Reset

TH-N12(KP)/TH-N18(KP)



Switching from manual to automatic : Break the stopper off and then, slide the switchover plate to the right (to position "A") to immobilize the reset bar.
Switching from automatic to manual : Slide the switchover plate to the left (to position "H").

TH-N20(KP)~N600(KP)



Switching from manual to automatic : Flip the stopper on the end of the reset bar down and then, after pushing it all the way in, rotate it counterclockwise 90° (to position "A").
Switching from automatic to manual : Rotate the reset bar 90° clockwise (to position "H") and the reset bar will pop out.

2.2 Electronic Motor Protection Relays

Series **ET-N**

ET-N60 60A

The MITSUBISHI series ET-N relay is an excellent relay that can protect motors electrically. Those series ET-N relays have the following excellent features.

Features

- Selectable Protection Mode
  Overload (including locked rotor condition)
  Phase failure (including current unbalance)
  Incorrect phase sequence
- Excellent Wide Current Range
- Easy Wiring
- Easy Setting and Maintainance
- Selectable Tripping Time at 600% of setting.
  Standard trip (7s.)
  Quick trip (3s.)
  Fast trip (5s.)
  Medium trip (15s.)
  Slow trip (30s.)
- Withstands High Overcurrent
- Fine Indication of Trip Mode
- Conformity to International Standards
- Can be mounted on 35mm rail (ET-N60)

Type Designation

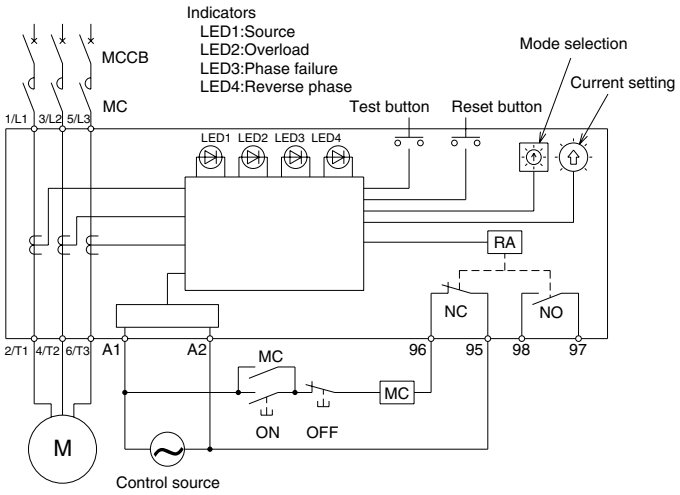
	15	D
	30	E

• Application to High Voltage or Big Motor Circuit

The high voltage current transformer (secondary current: smaller than 5A: capacity: more than 5VA) should be connected to ET-N60✻8A in the star connection, when the load is high voltage or big AC motor.

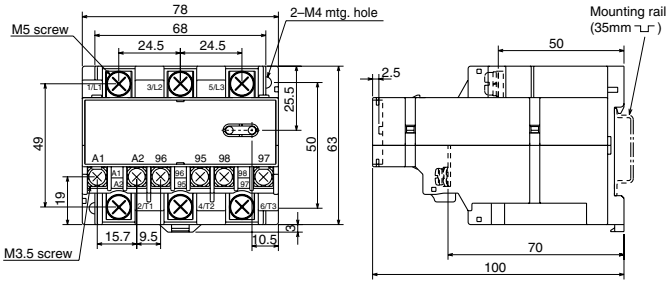
Wiring Precautions



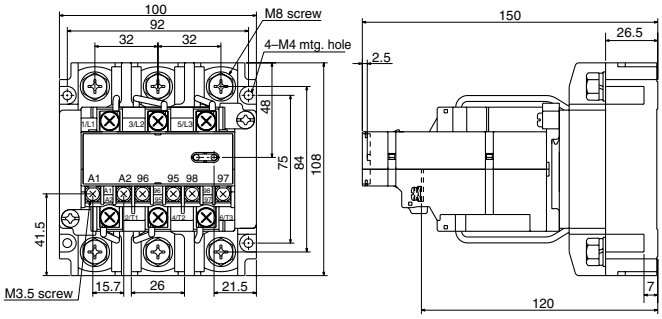
- The control source should be wired in the same phases as the contactor control source.
- When the load is a single phase motor, use 1/ L1-2/T1 and 5/L3-6/T3 phases.
  And re-set the position of changeover switch to “A” to “E”.

- If capacitors are used to correct the power factor, connect the capacitor in the power source side of the ET-N relay.

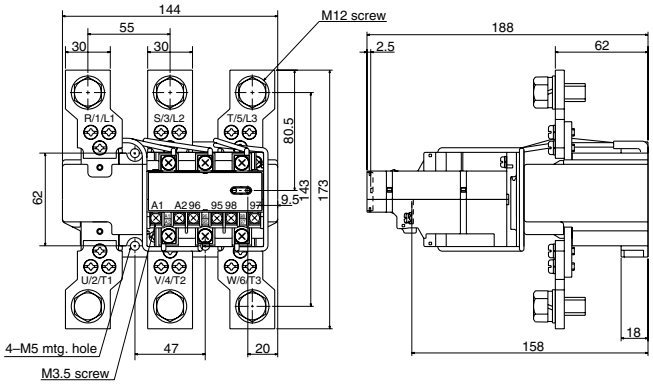
Outline Dimensions



ET-N60(1-60A) (Mass: 0.3kg)



ET-N150 (Mass: 1.6kg)

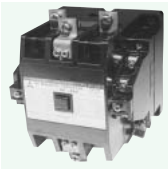


ET-N360 (Mass: 2.5kg)

3. DEFINITE PURPOSE CONTACTORS & STARTERS

3.1 DC Contactors

Series **DU**



DU-A60

DU-K180

The MITSUBISHI series DU contactors are designed for DC circuits, that is the variable-speed drive-control circuits (SCR switching circuit) and DC motor control circuits.

Features

- Compact design
- High break capacity
- CSA cirtified models are also available on AC operated type, add suffix “UR” immediately after the Frame size.
- Double break contacts
- UL recognized component (If marking is required add suffix “UR” immediately after the Frame size).
- Long Life

Type Designation

DU – A60 ✻ AC 200V

CONTROL TYPE	
DU	AC operated
DUD	DC operated

FRAME SIZE	
A30	50A frame
A60	90A frame
A120	160A frame
K180	260A frame
K260	360A frame

COIL DESIGNATION
see Table 3.1.3

Note: Mark ✻ indicates a blank space.

Specifications

- Number of main contacts type DU : 2NO1NC, type DUD : 2NO
  Number of auxiliary contacts type DU & DUD : 2NO2NC

Coils for DU-□[5]	**DU-□-COIL AC··V**
Coils for DUD-□[6]	**DUD-□-COIL DC··V**

Notes: 1. Contact kit of type DU consists of three moving contacts and six stationary contacts.
2. Contact kit of type DUD consists of two moving contacts and four stationary contacts.
3. Aux. contact kits of type DU(D)-A□ are all the same.
4. Aux. contact units of type DU(D)-K□, UN-AX 150 are the same as those of the standard series S-N contactors.
5. Coils for DU-K 180/K 260 are the same as S-N220/N300 each.
6. Coil for DUD-A30 includes only one coil. Other DC operated coils of type DUD include two coils.

3.2 Medium Voltage Vacuum Contactors

SH-V160

The MITSUBISHI series SH-V contactors are specially designed for the areas of mining, pumping, sawing and other applications where voltage above 1500VAC are frequently used.

Features

- Compact design
- Lightweight
- Long service life
- Easy inspection & maintenance
- Applications over a wide range of voltage
- High insulation strength

Type Designation

SH – V 160 * AC200V

CONTROL TYPE	
SH	AC operated
SHD	DC operated
SHL	AC & latched
SHLD	DC & latched

CONTACTOR TYPE	
V	Non-reversing
2XV	Reversing

FRAME SIZE	
160	160A frame
320	320A frame
400	400A frame
600[1]	600A frame

COIL DESIGNATION
See Table 3.3.3

*Note: Mark * indicates a blank space.*

Note: 1. Only AC operated non-reversing type is available for Frame size 600.
SH-V600 is not presently certified by CSA.

Permissible ambient temperature		°C	-10 to +55			
Coil voltage tolerance		times	0.85 to 1.1(rated coil voltage)			
Coil consumption	AC operated Inrush Sealed Watts	VA VA W	550 45 5.2			1150 55 7.3
	DC operated Inrush Sealed	VA VA	500 40			— —
	Mechanically latched Inrush	VA	550			—
Operating time(approx.)	Make Break	msec msec	40 130			65 80
Make and break current capacity	Make Break	times times	10(at AC3 rated operating current) 8(at AC3 rated operating current)			
Permissible switching frequency		operations/hour	1,200			
Vibration resistance	10-55Hz	m/s^2	19.6			
Shock resistance	Sine wave pulse	m/s^2	49			
Conductor size	Main terminals	mm^2	5.5-100	14-200		70-325
	Control terminals	mm^2	1-2.5			

Notes: 1. Mechanical life of the latched type is 0.25 million operations.
2. Mechanical life of vacuum tube is 1 million.
3. When the load is three pahse capacitors, electrical life is 0.1 million operations.
4. Electrical life of the latched type is 0.25 million operations.

● Coil Designation

Table 3.2.3

Coil designation	Rated voltaege
AC100V	100~127V 50/60Hz
AC200V	200~240V 50/60Hz
AC300V	260~350V 50/60Hz
AC400V	380~440V 50/60Hz
AC500V	460~550V 50/60Hz
DC100V	100-110 VDC
DC200V	200-220 VDC

Note: When ordering the latched type contactor, specify the coil designation of the closing coil and the tripping coil. Place"MC"before the closing coil designation and place"MT"before the tripping coil designation.

Spare Parts & Accessories

Table 3.2.4

3.3 Compact 3-Pole Contactors

The MITSUBISHI series S-N□8 compact 3-pole contactors are designed for limited panel space applications such as machine control panels.

S-N48

Features

- Compact design–Very limited required mounting space.
- Front clip-on type auxiliary contact block can be added.
- Coil surge absorbers are available.
- Can be mounted on 35mm rail.

Type Designation

S – 2X N38 CX * AC 200V

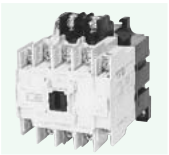
3.4 NC Main Contact Contactors



B-N20

B-N65

The MITSUBISHI series B-N contactors are specially designed for the dynamic braking circuit of motors, switching motor-starting resistors and switching of emergency lighting.

Features

- 2 or 3 NC main contacts.
- Suitable for a variety of loads.
- Conpact design
- Both AC operated models & DC operated models

Type Designation

B – N20 * AC100V * 3B

CONTROL TYPE	
B	AC operated
BD	DC operated

FRAME SIZE	
N20	25A frame
N65	80A frame
N100	120A frame

3.5 Delay Open Type Magnetic Starters & Contactors

Series **S/MSO-N☐DL**

MSO-N☐DL

The MITSUBISHI series MSO-N ☐ DL starters and S-N ☐ DL contactors are specially designed to prevent instantaneous “drop-out” when connected to motors, resulting from momentary voltage drop or power interruption caused by lightening or similar.
A capacitor connected in parallel with the operating coil of the contactor discharges so that the starter or contactor will remain closed for 1 to 4 seconds.

Type Designation

MSO – N21 DL ∗ 7.5kW ∗ 380V ∗ AC200V

MSO	TYPE	FRAME SIZE	MOTOR LOAD CAPACITY	MAIN CIRCUIT VOLTAGE	CONTROL CIRCUIT VOLTAGE	
MSO	Starter	See Table 3.5.1	7.5kW	380V	AC100V	100-110V 50/60Hz
S	Contactor				AC200V	200-220V 50/60Hz

Note: Mark ∗ indicates a blank space.

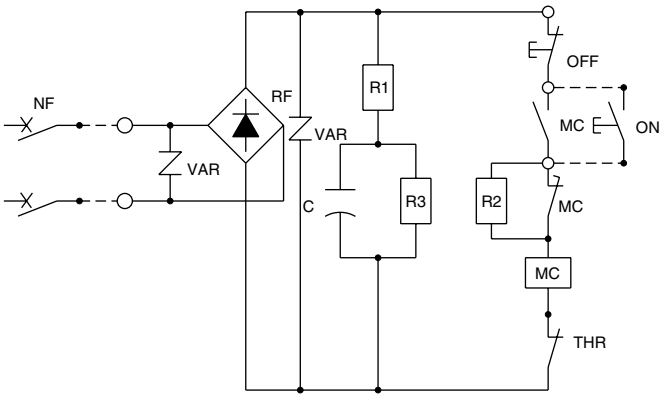
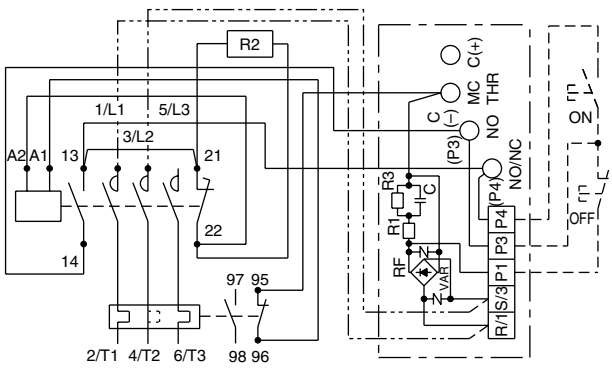
• Diagrams Circuit



• Typical Wiring Diagram



Note: R/1-R/1 & S/3-S/3 (——) wiring is omitted if the control circuit voltage is 100VAC or the main circuit voltage differs from the control circuit voltage.

● Caution

1. When the circuit breaker (NF) is made (ON) and disconnected (OFF) repeatedly within a short time interval [eg: when the instantaneous power failure occurs within a short time interval], electrical parts might be damaged or specified holding time might not be assured.
   Causes; 1) Overload occurs by frequent inrush current to RF and R1.
   2) Enough electricity is not charged into the capacitor (C).
2. Even after the power is turned off (after the NF is disconnected), current might remain in the capacitor (C). So please take care to avoid the electrical shock, when you check or repair the system.

Notes: 1. Dimensions CB is the arc clearance.
2. Outline dimensions of S-N□DL are the same as those of MSO-N□DL, except for S-N300/N400DL. Dimension B of S-N300/N400DL is 250mm.

3.6 DC Interface Contactors

SD-Q11

MSOD-Q11

SD-Q DC interface contactors designed to be directly driven by the transistor output DC24V are DC operated contactors of compact size and high ability.

- By combining the efficient electromagnet with permanent magnet, SD-Q contactors are able to be directly driven by the transistor output DC24V 0.1A of a programmable logic controller, etc. SD-Q series is lineup contained reversing contactors applied to motors of 3ϕ 440V5.5kW starters with the thermal overload relay, and additional auxiliary contact block, etc.

c UL us LISTED

TÜV

Features

- Special design to be directly driven by the transistor output DC24V
- By combining an electromagnet with permanent magnet, coil operating current is reduced to DC24V55mA(1.3W) for SD-Q11 and DC24V75mA(1.8W) for SD-Q19
- Compliance with many international standards
  Applicable standards: IEC, DIN, VDE, BS, JIS, JEM
  Approved standards: UL, CSA, TÜV
- Built-in surge absorber
- Provision of terminal covers
- Mountable on a IEC 35mm width rail
- Compact size and high performance
  SD-Q11, SD-Q12 : 3ϕ240V3kW SD-Q19 : 3ϕ240V4.5kW
  3ϕ440V4kW 3ϕ440V5.5kW
- Mirror contact: Normally closed auxiliary contact cannot be closed when power contact is welded. The function conform to requirements of IEC60947-4-1.
- Variable combination: Auxiliary contact block (UQ-AX2(KR)) can be added onto a contactor (SD-Q11 (SD-QR11))

3.7 DC Interface Modules

S-N21CX+UN-SY21CX

The MITSUBISHI type UN-SY interface module is an optional unit for S-N series contactors or SR-N series relays, controlled by the transistor output of a programmable controller.

Features

- Easy mounting on the Type S-N10 to S-N65 contactors and SR-N series relays.
- Separate mounting type for the Type S-N80 to S-N400 contactors.
- Relay or solid state output versions are available.

Type Designation

UN-SY 1 | 2 | CX

APPLICABLE CONTACTOR OR RELAY	
UN-SY2	S-N10 to N35, SR-N4
UN-SY3	S-N50 to N65
UN-SY1	S-N80 to N400

OUTPUT	
1	Solid state relay output
2	Relay output

FINGER PROTECTION	
None	Not provided
CX	Provided

Note: Suffix "CX" is available only for UN-SY21 or SY22.

Mounting

- Direct mounting —Type S-N10 to S-N65 and SR-N4
  Remove the coil terminal screw from the contactor or relay, then slide the tab on the interface module to the groove on the contactor or relay. Fasten the connecting conductor with the coil terminal screw.
- Separate mounting —Type S-N80 to S-N400
  Mount the interface module (UN-SY11/12) with screw on a panel as follows.

4. RELAYS

Series **SR-N**

4.1 Contactor Relays

SR-N4

The MITSUBISHI series SR-N contactor relays are specially designed for use in low voltage control circuit applications. Series SR-N have many superior features.

Features

- High reliability: By adopting bifurcated moving contacts and by improving the shape of the contacts, contact performance has been made more reliable than ever.
- Long life
- Can be mounted on 35mm rail
- Dust-proof construction
- Easily visible coil ratings
- Easy wiring (self-rising terminal screws)
- Various accessories common with the series S-N contactors
(Head-and side clip-on type additional aux. contact blocks, surge absorbers, safety covers)
- Finger protected types are available (DIN 57106/VDE 0106 Part 100)

Type Designation

- **Standard types**

SR – N4 LC ∗ AC200V ∗ 2A2B

Note: Front clip-on and side clip-on contact block should not be mounted both.

4.2 Voltage Detection Relays

SRE-AA

The MITSUBISHI series SRE relays are specially designed for voltage sensing.The type SRE-A is specially designed for the detection of undervoltage or overvoltage conditions.The type SRE-K is particularly useful for the switching of automatic transfer panels.The type SRE-K can detect undervoltage by simply connecting to the power-source terminals.

Features

- High sensibility
- High reliability
- Easy wiring
- High surge tolerance
- Wide detective voltage range

Type Designation

4.3 Re-Starting Relay

UA-DL2 with PF-08RM

The MITSUBISHI series UA-DL re-starting relays are specially designed for automatic re-starting. When the power recovers from an instantaneous power failure or voltage drop the UA-DL re-starts the stopped equipment or machines.

Features

- Easy installation and easy wiring
- Compact design
- Versatility of the control voltage (100VAC & 200VAC)
- Indicator lamp is provided.
- Selectable permissible max. power failure time (1sec. & 2sec.).

Type Designation

UA-DL2 ∗ AC100/200V

CONTROL VOLTAGE	
Ordering designation	Rated control voltage (50/60Hz)
AC100/200V	100-110/200-220VAC
AC120V	100-110/110-120VAC
AC240V	200-220/220-240VAC

SOCKETS type: PF-08RM/08TM
See page 66

Notes: 1. DC control voltage type is not available.
2. Mark ∗ indicates a blank space.

Specifications

● Ratings & characteristics

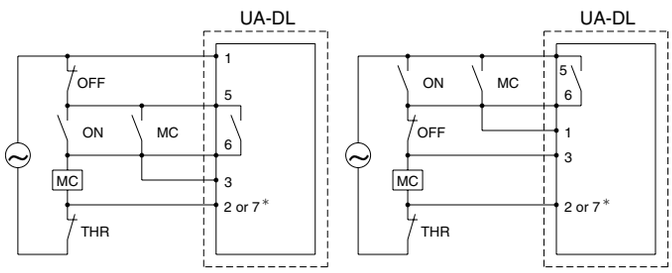
Table 4.3.1

Output contact arrangement				1 NO
Rated operating current of output contact	Category AC-15	110VAC	A	1.5
		220VAC	A	1.0
Selection of permissible max. power failure time			sec.	1 and 2
Accuracy	Set permissible power failure time		%	–20 to +50 (when 100VAC/200VAC is applied)
	Control voltage fluctuation		%	±35
	Ambient temperature change		%	±25
Minimum energizing time			sec.	5
Electrical life			operations	0.5 million
Permissible ambient temperature/humidity			°C/ %RH	–10 to +55/max. 85
Control voltage tolerance			%	85 to 110 (rated control voltage)
Power consumption			VA	3
Vibration resistance		10 to 55Hz	m/s^2	19.6
Shock resistance		10 msec. half sine wave	m/s^2	98
Withstand voltage			VAC	2000 (50/60Hz 1min.)
Insulation resistance			MΩ	min. 100

Note: 1. When shipping, permissible power failure is set to 2 secs.
When the required re-setting time is 1 sec., please turn the time setting dial to left until it stops.
When you want the permissible power failure time longer than 2 sec., please consult with MITSUBISHI.

● Connection diagrams

Fig. 4.3.1



Connection of control switch differs in the above 2 connection diagrams.

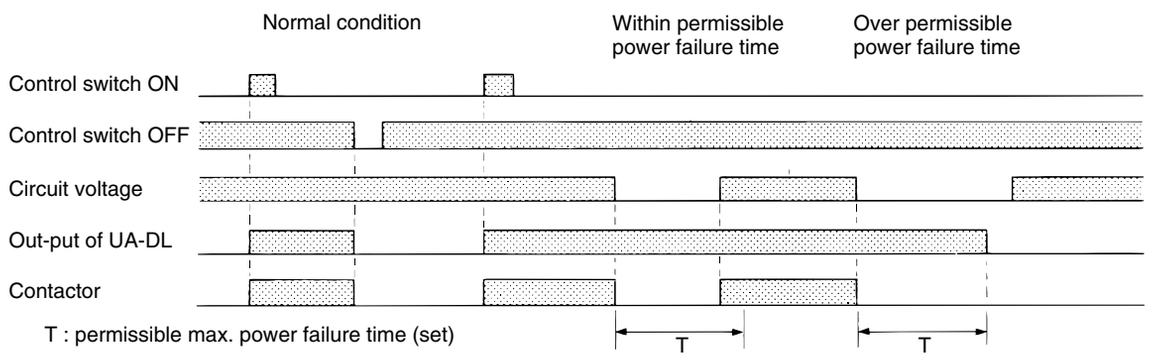
✱ Selection table of terminals Table 4.3.2

Control voltage / Terminal No.	AC100/200V	AC120V	AC240V
2	100-110VAC	100-110VAC	200-220VAC
7	200-220VAC	110-120VAC	220-240VAC

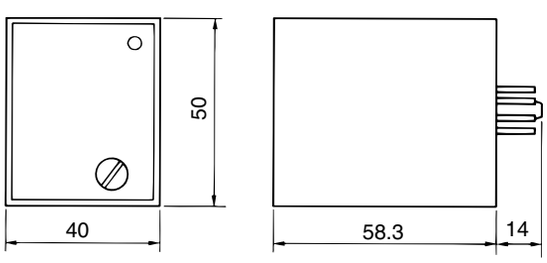
1. The terminal (2) and (7) connections differ according to the control circuit voltage. Connect according to the circuit voltage. (Refer to conffarm, above Table 4.3.2)
2. The external switch (OFF push-button switch in connection diagram) which issues the OFF command requires an OFF time of 50ms or more.
3. When using a relay contact instead of the push-button switch (OFF), use a contact that does not open when the power fails. If the push-button switch (OFF) section opens, UA-DL2 will turn OFF, and the magnetic contactor will not restart.
4. An electrolytic capacitor is used, so periodically check the operation time.

● Operation characteristics

Fig. 4.3.2

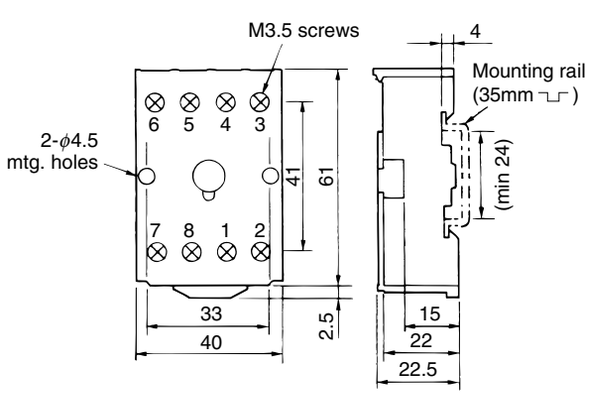


■ Outline Dimensions

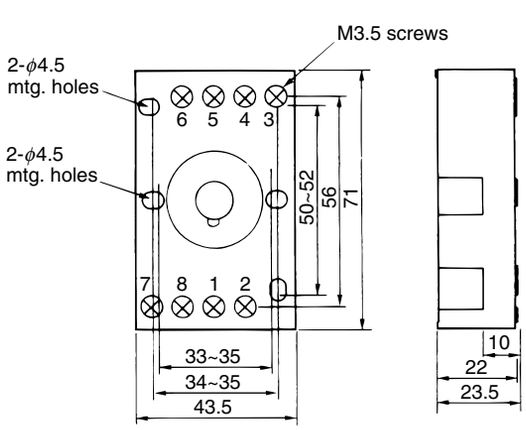


UA-DL2 (Mass: 0.1kg)

Note: 2 pcs of locking springs are enclosed in the each package of UA-DL.



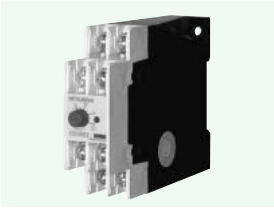
PF-08RM (Mass: 0.05kg)



PF-08TM (Mass: 0.05kg)

4.4 Solid State Time Delay Relays

Series **SRS-H**



SRS-HNPS

The MITSUBISHI series SRS-H solid state time delay relays are specially designed for high accuracy and easy mounting.

Features

- High accuracy
- Compact design
- High reliability
- Easy mounting (for direct panel mounting or mounting on 35mm rail)
- With finger protection (terminal cover) model is available
- 1 delayed & 1 instantaneous changeover contact for ON-delay relay.

Type Designation

ON-delay : SRS-H NP [S] – [AC200V]

DELAYING TIME	
S	3 sec.-30sec.

CONTROL VOLTAGE

4.5 Pneumatic Time Delay Relays

Series **SRT-N**

SRT-NN

The MITSUBISHI series SRT pneumatic time delay relays are designed for general purpose time delaying,such as star-delta starters and transfer panels.

Features

- Easy delaying time adjustment
- Can be mounted on 35mm rail
- High contact reliability:By using bifurcated moving contacts,contact performance has been made more reliable than ever.
- Finger protected types are available
- Manual testing
- 2 delayed contacts(1NO1NC)&4 instantaneous contacts(2NO2NC)

Type Designation

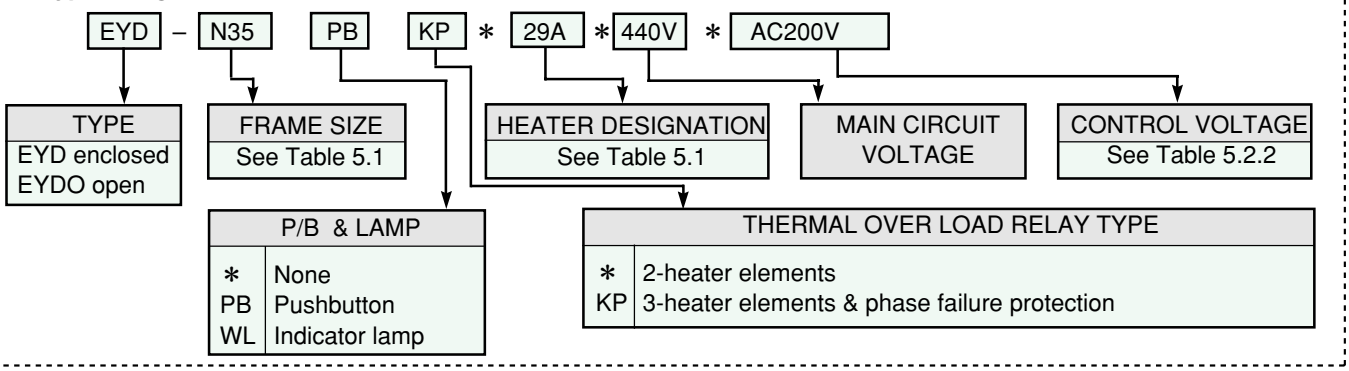
5. STAR-DELTA STARTERS

Series **EYD-N**

EYD-N35

The MITSUBISHI series EYD-N star-delta starters are generally suitable for squirrel-cage motors of 4kW to 250kW which can be started at no-load or reduced load during starting, the motor is star-connected, reducing current and torque to 1/3 of direct-on-line starting values.
So the voltage drop, due to starting current, can be reduced.Series EYD-N star-delta starters are the simplest and cheapest methods of all reduced-voltage starting methods. Series EYD-N star-delta starters comprise three contactors (for running, delta operation and star operation), one thermal overload relay and one time-delay relay (series SRS-H, solid-state time delay relay). The star-delta changeover time is set to 10 sec when shipped,but is easily adjustable from 3 sec. to 30 sec. The O.L.R.heater is set at the heater designation value (following) when shipped, and be sure to re-set to suit the motor full-load current in the field.

Type Designation



Note: Mark ∗ indicates a blank space

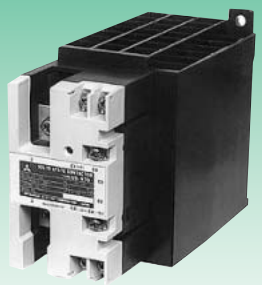
6. SOLID STATE CONTACTORS

6.1 Features

US-N/K Series (for motor/heater load)

US-N5SSTE

US-N20TE



US-K70

High-accuracy opening/closing, maintenance-free

With no electrical or mechanical wear sections, this type is a suitable maintenance-free selection for high-accuracy opening/closing (motor, heater, light, capacitor switching, etc.)

No sound noise, clean operation

The best suitable for applications that reduce to avoid sound noise (Ex.: hotels, hospitals, offices, or clean rooms, etc.).

Applicable to a wide range of main circuit voltage (US-N20(TE) to US-N50(TE))

Can be used with a wide main voltage range from 100 to 480VAC.

Conformity to International Standards (US-N Series)

The standard model complies with or is approved to be compliant with not only domestic standards but also various overseas standards.

Standard installation protection cover for live part location to improved safety (US-N Series)

A live part location protection cover, with finger protection complying with DIN and VDE Standards, is provided as a standard to improve safety.

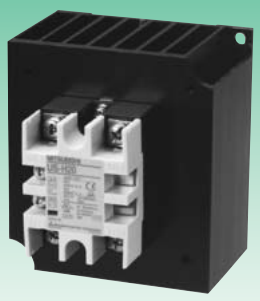
Various line up and series

<Heater load>
- ●2-circuit, 3-circuit integrated type
- ●Cycle control type power adjuster

<Motor load>
- ●2-circuit, 3-circuit integrated type

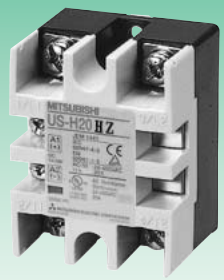
<Current frame>
200VAC 5A to 200A frame
400VAC 20A to 200A frame

US-H Series (for heater load)



US-H20

US-H40DD



US-H20HZ

Best suitable for heater loads

Suitable for high-accuracy opening/closing applications such as injection molding machines and semiconductor manufacturing machines, etc.

Applicable to a wide rang of main circuit voltage

Can be used with a wide main voltage range from 24 to 480VAC.

Conformity to International Standards

The standard model complies with or is approved to be compliant with not only domestic standards but also various overseas standards.

Live part location protection cover available for improved safety (option)

A live part location protection cover (Type UN-CV501US) can be easily mounted after the control cabinet is mounted to improve safety.

6.2 Product Scope

US-N/K • US-H Series Models

Table 1. US-N type, US-K type solid state contactors (standard model)

200VAC class (100 to 240VAC)	AC-1 class rated operating current (A) (Note 5)		5	8	20	30	40	50	70
	Heater capacity (kW)	1 ϕ 200V (Note 2)	1	1.6	4	6	8	10	14
		3 ϕ 200V	1.7	2.7	6.9	10.3	13.8	17.3	24.2 (Note 1)
	Maximum motor capacity (kW)		0.4	0.4	2.2	3.7	5.5	5.5	11 (Note 1)
	For three-phase load US-N□ US-K□		 US-N5SS US-N5SSTE	 US-N8SS US-N8SSTE	 US-N20 US-N20TE	 US-N30 US-N30TE	 US-N40 US-N40TE	 US-N50 US-N50TE	 US-N70NS US-N70NSTE
	For single-phase load For three-phase load (using two or three) US-K□								 US-K70
400VAC class (200 to 440VAC)	AC-1 class rated operating current (A) (Note 5)				20	30	40	50	70
	Heater capacity (kW)	1 ϕ 400V (Note 2)			8	12	16	20	28
		3 ϕ 400V			13.8	20.7	27.7	34.6	48.5 (Note 1)
	Maximum motor capacity (kW)				3.7	7.5	7.5	15	22 (Note 1)
	For three-phase load US-N□ US-NH□ US-KH□				 US-N20 US-N20TE	 US-N30 US-N30TE	 US-N40 US-N40TE	 US-N50 US-N50TE	 US-NH70NS US-NH70NSTE
	For single-phase load For three-phase load (using two or three) US-KH□								 US-KH70

Mounting on 35mm rail		Possible with standard product	(Note 4)	
Protection cover for live part location		Mounted as a standard part (Not mounted for US-K70 or KH70)		
	Driving unit		UA-DR1	
	Driving unit with output	UA-SH8 (Note 6)	UA-SH1	
	Reversing unit	UA-RE		
	Fault detecting unit	UN-FD (for main circuit 200V), UN-FD4 (for main circuit 400V)		
	Power control unit	UA-PC		
	Options (Note 3)	 UA-SH8	 UA-DR1	 UA-SH1	 UA-RE

	80	100	120	150	200
	16	20	24	30	40
	27.7	34.6 (Note 1)	41.5	52 (Note 1)	69 (Note 1)
	11	15 (Note 1)	15	18.5 (Note 1)	22 (Note 1)
	 US-N80NS US-N80NSTE	 US-K100TE	 US-K120TE	 US-K150TE	
		 US-K100		 US-K150	 US-K200

	80	100	120	150	200
	32	40	48	60	80
	55.4	69.3 (Note 1)	83	103.9 (Note 1)	138.5 (Note 1)
	22	30 (Note 1)	30	37 (Note 1)	45 (Note 1)
	 US-NH80NS US-NH80NSTE	 US-KH100TE	 US-KH120TE	 US-KH150TE	
		 US-KH100		 US-KH150	 US-KH200

	 UN-FD
	 UA-PC

Table 2. US-K type solid state contactor (for DC lord)

Direct current	DC-1 class rated operating current (A)		8
	Rated voltage		DC24~110V
	For DC load US-KD8		 US-KD8
Option		Driving unit with output	UA-SH8
Mounting on 35mm rail			Possible with standard product

Note 1. For the US-K(H)□ type, the capacity when applied for a three-phase load using two or three US-K(H)□ type units for the single-phase load is shown.
Note 2. This is the capacity per pole.
Note 3. □ in the option unit field indicates the applicable range.
Note 4. Possible with a dedicated part (US-□RM).
Note 5. If ambient temperature is higher than 40°C, the derating factor shown in Fig.1 should be applied to the rated operating current.
Note 6. When installing the output driving unit UA-SH8 type onto the US-N5SS/N8SS (TE) type, remove the US-N□ type unit's cover first.

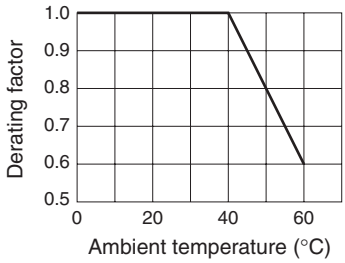


Fig.1

US-H Series Models

Solid state contactor for heater loads, suitable for high-frequency heater switching applications such as injection molding machines and semiconductor manufacturing machines.

Table 3. US-H type solid state contactor

Rated operating current (AC-51) (-10 to 40°C) (Note 1)		20A	30A	40A	50A	20A	30A	40A	50A
Heater capacity (-10 to 40°C) (Note 1)	1 ϕ 200V	4kW	6kW	8kW	10kW	4kW	6kW	8kW	10kW
	3 ϕ 400V	6.9kW	10.3kW	13.8kW	17.3kW	–	–	–	–
	3 ϕ 400V	13.8kW	20.7kW	27.7kW	34.6kW	–	–	–	–
Tolerable maximum current (peak) 60Hz 1 cycle		330A	800A	1000A	1300A	330A	800A	1000A	1300A
Rated operating voltage		AC24V~AC480V 50/60Hz							
Operating voltage range		AC20V~AC528V							
Main circuit control method		Batch control				Individual control			
Standard		US-H20	US-H30	US-H40	US-H50	US-H20DD	US-H30DD	US-H40DD	US-H50DD
		 US-H20		 US-H40		 US-H20DD		 US-H40DD	
Mounting on 35mm rail		US-H20RM	US-H30RM	–	–	US-H20DDRM	US-H30DDRM	–	–
Options	Fault detecting unit	UN-FD (for main circuit 200V) UN-FD4 (for main circuit 400V)							
	Power control unit	UA-PC							
	Protection cover of live part location	UN-CV501US							

Note:1. If ambient temperature is higher than 40°C, the derating factor shown in fig.2 should be applied to the rated operating current.
