# Delta Hybrid Energy Saving System

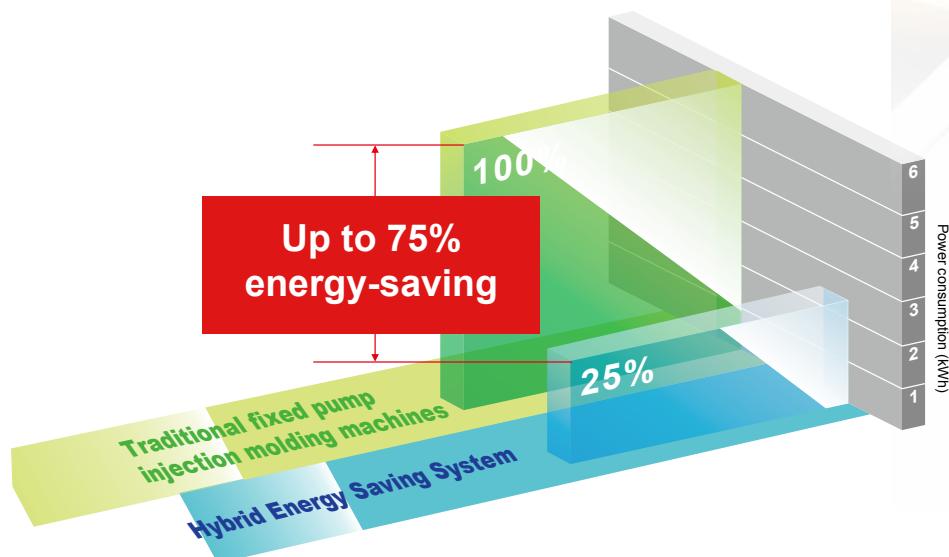

## HES-C Series

Based on the mission statement, "To provide innovative, clean and energy-efficient solutions for a better tomorrow", Delta is committed to developing advanced variable frequency control technology for enhanced efficiency and greater energy-savings. Plastic products are widely used in our living environment for daily commodities, electronic devices and automotive components. Injection molding machines play a key role in plastic products production. There are four major energy consuming units in a traditional injection molding machine including the hydraulic pump, the heating unit, the cooling system, and the control system components. The hydraulic pump system consumes the most energy and accounts for more than 75% of the total power consumption in an injection molding manufacturing process. An injection molding cycle consists of several stages from mold closing, injection, pressure holding, plasticization, mold opening to ejection. Each stage requires a different pressure and flow. The oil pump motor is under variable loading. Traditionally, the overflow valve and the ratio valve adjust the excess pressure and flow that occurs at each stage. This process is known as "high-pressure throttle". It accounts for 40%~75% of the energy lost. The Delta Hybrid Energy Saving System HES-C Series provides precise pressure and flow control, eliminating energy loss in the high pressure throttle process. It helps injection molding machines save energy while enhancing productivity and precision. The Delta HES Series provides the best solution for injection molding machines.

### Ultra Energy-Saving

- Saves up to **75%** power consumption depending on the different injection conditions

# System Features

## (1) Superior Energy-saving Results

- A field test with an 850-ton injection molding machine adopted the Delta HES250M43 double-pump confluence hydraulic system.
- The Delta HES-C Series saved up to **109,500 kWh** in energy consumption and reduced **69,861 kg CO<sub>2</sub>e** emissions in a year compared with competing products operating 24 hours per day.

850T Injection Molding Machine	Delta		Competitor 1		Competitor 2	
Double-Pump Operation Hydraulic System	Master Pump 125cc	Slave Pump 125cc	Master Pump 125cc	Slave Pump 125cc	Master Pump 100cc	Slave Pump 100cc
Power Consumption (kWh)	<b>5.63</b>	<b>5.22</b>	8.01	6.96	11.84	11.52

## (2) High Overload Capability

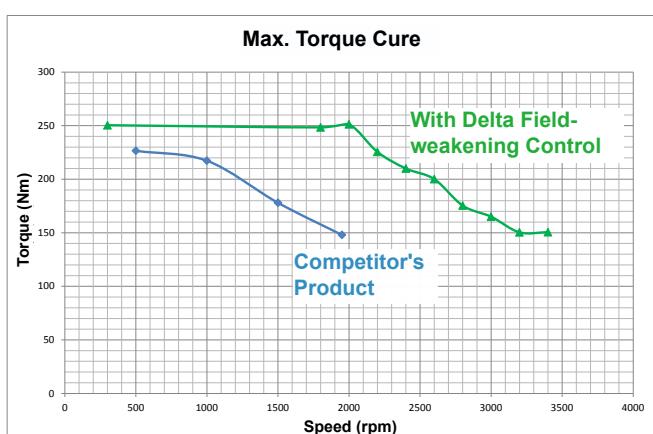

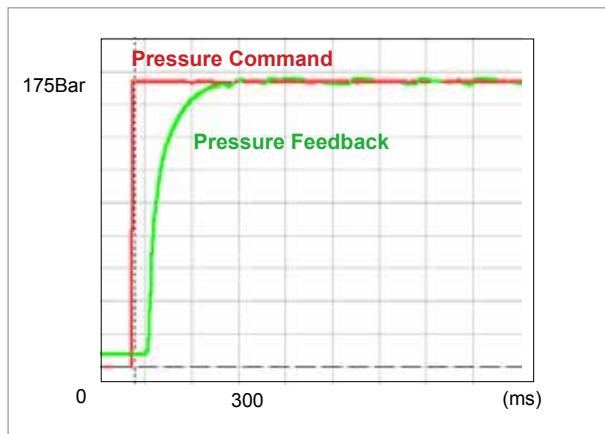

- All HES models feature overload capability of max. pressure 175bar for 60 seconds which is especially suitable for thick products production. Please refer to the Pressure-Flow Characteristic Chart on the following pages for more details.

## (3) PID Pressure Control

- Using Delta's special PID control technique, the system is able to perform pressure overshoot under **3bar** with optimized response time.

## (4) Field-Weakening Control of a Motor

- Delta's servo drive uses motor field-weakening control to effectively extend the motor operation scope, increase system flow and ensure productivity of the injection molding machine.

## (5) Easy Commissioning

- Users can directly use the Delta preset motor and hydraulic system parameters without the need for additional tuning, simply install the drive to easily begin the operation.

## (6) Multiple Protections

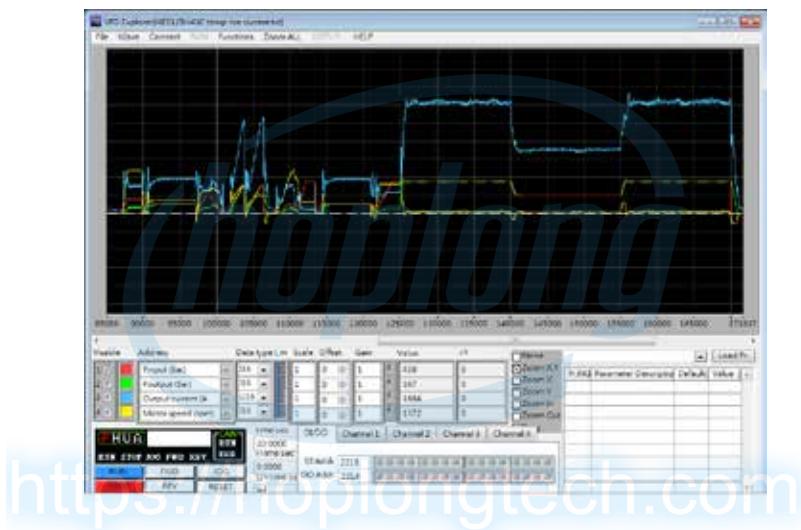

- Prolong system service life by providing protections from over-current, over-voltage, overheating, braking current and more.
- Real-time monitoring of the motor temperature via KTY84-130 temperature sensor embedded in the motor winding.

## (7) Multiple Pumps Control

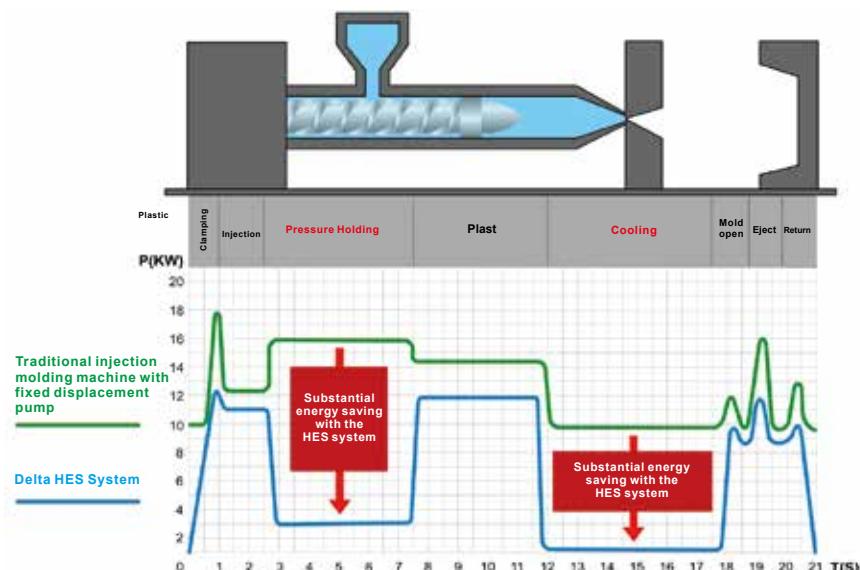

- Capable of controlling up to 12 pumps and multiple master/slave pumps system architecture. Users can integrate systems with a different HES flow rate depending upon the system requirements of the machines.

## (8) User-Friendly Software

- User-friendly software for machine commissioning. The software presents real-time system parameters such as pressure, flow, motor current and motor speed.

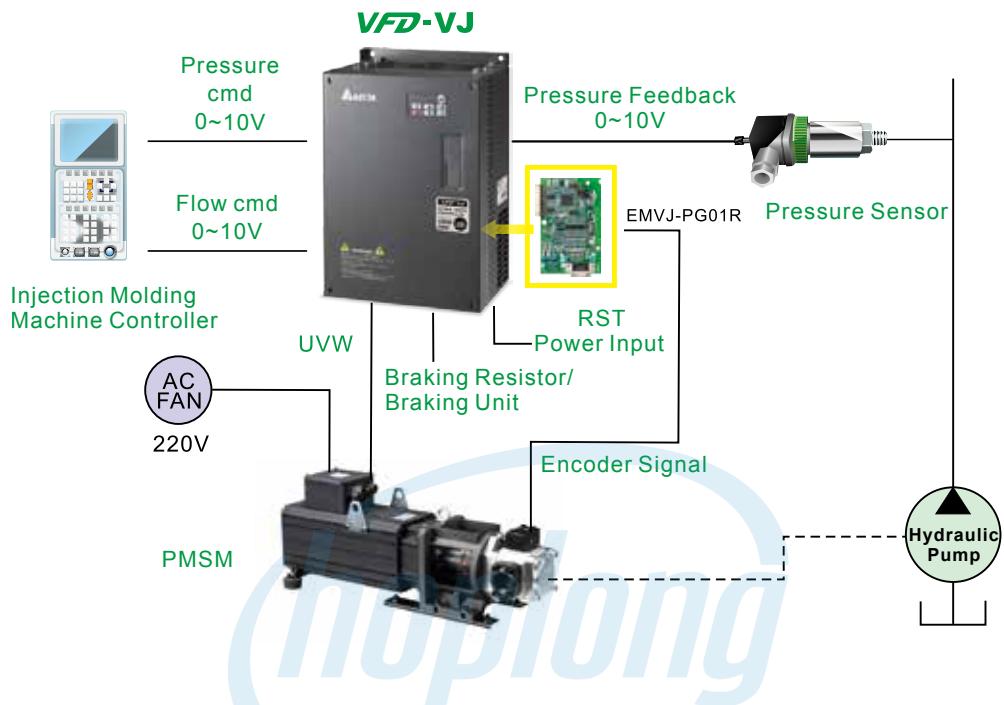

## Energy Consumption Curve of the Injection Molding Process

# System Structure

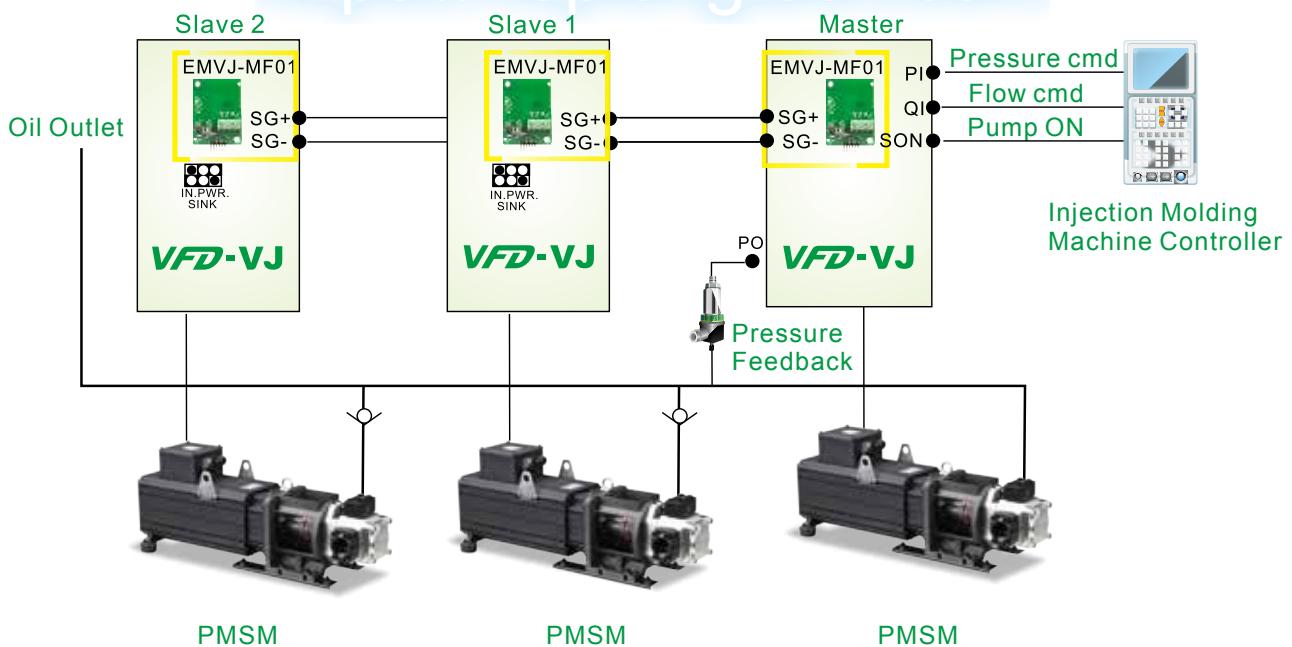

Hybrid Servo Drive + AC Servo Motor + Internal Gear Pump + Pressure Sensor with PID controls

The system provides precise pressure and speed control and fast response time to ensure high duplication accuracy.

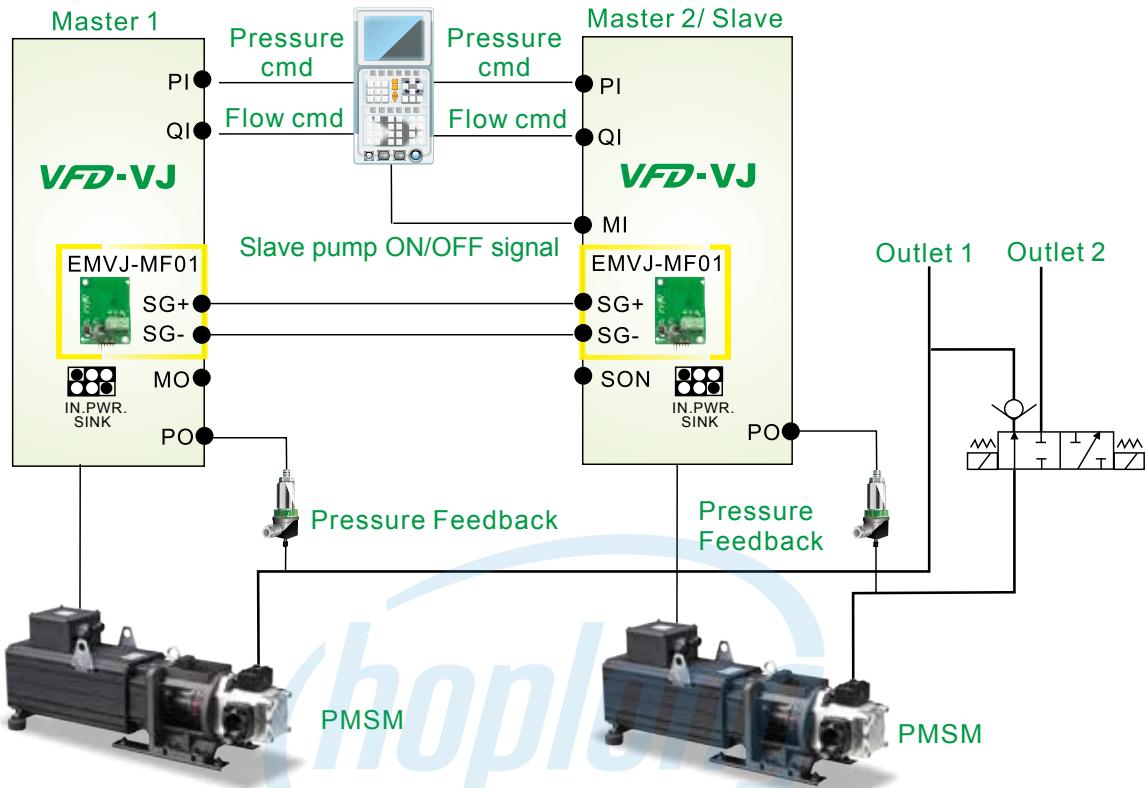

## Multi-pump Convergent Flow Control
