OsiSense XU

Selection guide page 2

- Multimode: Simplicity through innovation page 14
- General page 16

OsiSense XU, general purpose

- Design 18
 - Single mode function, plastic page 28
 - Single mode function, metal page 30
 - Multimode function, metal or plastic page 32
- Miniature design
 - Single mode function, plastic page 34
 - Multimode function, plastic page 38
 - Diffuse mode with adjustable background and foreground page 40
- Compact design, 50 x 50
 - Single mode function, plastic page 42
 - Multimode function, plastic page 44
 - Diffuse with adjustable background suppression page 46
- Compact design, 92 x 77
 - Single mode function, plastic page 50
 - Multimode function, plastic page 52
 - Diffuse with adjustable background suppression page 54

OsiSense XU Application, fork and frame form

- Fork design
 - Optical fork without adjustment page 56
 - Optical fork with teach mode page 58
 - Optical fork with laser transmission and with teach mode page 60
 - Ultrasonic fork, packaging series page 62
 - Optical fork for detection of opaque labels page 64
 - Optical fork with teach mode, packaging series page 66
 - Optical fork with integral amplifier, mechanical handling series page 70
- Frame design
 - Dynamic detection of passage of objects, conveying series page 72

OsiSense XU Application, packaging series

- Detection of contrast
 - Compact design 50 X 50 page 74
 - Fibre design, with teach mode page 76
 - Compact design 81 X 58 page 78
- Luminescence sensor page 80
- Illumination sensor page 82
- For detection of transparent materials page 84
- For detection of transparent materials, with teach mode page 88
- For colour detection, sorting page 90

OsiSense XU Application, food and beverage series

- Design 18, stainless steel, multimode function page 92
- Design 18, stainless steel, single mode page 94
- Compact design, stainless steel, monomode page 98

OsiSense XU Application, assembly and conveying series

- Metal case, cylindrical, threaded M8 x 1 for assembly series page 102
- Miniature design for conveyor system and access control series page 104
- Miniature design with laser transmission for assembly series and conveyor system page 106
- Compact design with laser transmission for assembly series page 108
- Cylindrical design for detecting packages on a roller conveyor page 112

OsiSense XU Application, materials handling series

- Design 18, laser transmission page 116
- With analogue output signal 4...20 mA and 0...10 V page 118
- With analogue output signal 4...20 mA page 120
- Laser transmission with solid-state and analogue output signal 4...20 mA page 122
- Thru-beam system with high "excess gain" page 124
- Laser transmission with analogue output signal 4...20 mA and 0...10 V page 126
- Laser transmission with background suppression page 128
- Diffuse with 2 channels using triangulation. page 130

OsiSense XU Application, amplifier and fibre optics

- Amplifiers with teach mode page 132
- "Plastic" fibre optics for amplifiers. page 134
- "Glass" fibre optics for amplifier page 142
- Ecofibre system in "plastic" for customer assembly page 148
- Amplifiers for plastic or glass fibre optics page 150

OsiSense XU Application, other formats

- Compact design, conveying serie page 152
- Compact design for conveyor system and access control system page 154
- Design 18, a.c. or d.c.supply, solid-state output with adjustable sensitivity. page 156

OsiSense XU Application, tertiary sector series

- For access detection page 158
- With integral buzzer page 160

OsiSense XU

- Accessories page 162
- Curves page 172

Index

- Product reference index. page 182

Principle

In proposing multimode products, Telemecanique Sensors offers simplicity through innovation.

■ With the multimode function, a single product meets all the requirements for optical detection. Effectively, by simply pressing the “Teach mode” button, the sensor automatically acquires optimum configuration for the application requirements

- 1 Diffuse system detection of object.
- 2 Diffuse system, with background suppression, detection of object.
- 3 Reflex system (reflector accessory) detection of object.
- 4 Thru-beam system, on optical receiver (transmitter accessory for thru-beam use), detection of object.

■ In addition to this, a multimode sensors also means:

- improved performance: maximum sensing distance guaranteed and optimised for each application,
- simplified use: intuitive setting-up plus less and easier maintenance,
- lower costs: the number of references is divided by 10 and, consequently, selection and supply is simplified and storage costs significantly reduced,
- guaranteed maximum productivity.

Straightforward NO or NC output

■ Irrespective of the detection mode used (diffuse, reflex, thru-beam, etc.), the outputs become either NO or NC (1).

■ A multimode sensor means immediate and intuitive setting-up that is accessible to all.

(1) The sensor is supplied in NO configuration. NO or NC selection is performed by simply pressing the Teach mode button.

Fixing accessories

A complete range of inexpensive mounting accessories (clamps, traditional or 3D brackets, etc.) is available that provides solutions for all installation and adjustment problems

Sensing distances (see table above)

Sensing distance without accessory with background suppression

- Without accessory, the multimode sensor detects objects irrespective of their colour or background.
- A clean environment is recommended

Sensing distance without accessory

- Beyond the sensing distance with background suppression, the same multimode sensor without accessory detects objects but may be influenced by the backgrounds and colour of the objects to be detected.

Sensing distance with polarised reflector

- By installing a reflector opposite, the same multimode sensor detects objects irrespective of their shininess and colour.
- The size of the reflector must be smaller than that of the object to be detected.
- The larger the area of the reflector the longer the sensing distance.

Sensing distance with thru-beam transmitter accessory

- After setting-up and connecting a thru-beam transmitter accessory opposite, the same multimode sensor detects objects irrespective of their shininess, colour or background.
- The detection distance is a maximum.
- The sensor and the thru-beam transmitter must be carefully aligned.
- Good resistance to accumulation of dirt and dust.

Recommendation

The sensors detailed in this catalogue are designed for use in standard industrial applications relating to presence detection. These sensors do not incorporate the required redundant electrical circuit enabling their usage in safety applications. For safety applications, please refer to our "Safety solutions using Preventa" catalogue.

Quality control

Our photo-electric sensors are subject to special precautions in order to guarantee their reliability in the most arduous industrial environments.

■ Qualification

- The product characteristics stated in this catalogue are subject to a **qualification procedure** carried out in our laboratories.
- In particular, the products are subjected to **climatic cycle** tests for 3000 hours whilst powered-up to verify their ability to maintain their characteristics over time.

■ Production

- The electrical characteristics and sensing distances at both ambient temperature and extreme temperatures are 100% checked.
- Products are randomly selected during the course of production and subjected to **monitoring tests** relating to all their characteristics.

■ Customer returns

- If, in spite of all these precautions, defective products are returned to us, they are subject to **systematic analysis** and **corrective actions** are implemented to eliminate the risks of the fault recurring.

Immunity to ambient light

- OsiSense XU photo-electric sensors use the pulsed light principle. This provides a high degree of immunity to spurious light that conforms to standard **IEC 60947-5-2**.

Resistance to electromagnetic interference

The photo-electric sensors are tested in accordance with the recommendations of the standard **IEC 60947-5-2**

- Electrostatic discharges

IEC/EN 61000-4-2

- ≈ 15 kV version, level 4
- 8 kV version, level 3

- Radiated electromagnetic fields (electromagnetic waves) **IEC/EN 61000-4-3**

10 V/metre, level 3

- Fast transients in salvos (motor start/stop interference) **IEC/EN 61000-4-4**

2 kV, level 4

- Impulse voltages, lightning

IEC 60947-5-2

- ≈ 2.5 kV version
- 1 kV version

Mechanical shock resistance

The sensors are tested in accordance with standard IEC 60068-2-27, 30 gn, duration 11 ms.

Vibration resistance

The sensors are tested in accordance with standard IEC 60068-2-6, 7 gn, amplitude ± 1.5 mm, f = 10...55 Hz.

Resistance to chemicals in the environment

- Owing to the very wide range of chemicals encountered in industry, it is very difficult to give general guidelines common to all sensors.

- To ensure lasting efficient operation, it is essential that any chemicals coming into contact with the sensors will not affect their casing and, in doing so, prevent their reliable operation (please refer to the characteristics pages for the various sensors).

In all cases, the materials selected (see product characteristics) provide satisfactory compatibility in most industrial environments (for further information, please consult our Customer Care Centre).

Principle of optical detection

- 1 Light beam transmitter
- 2 Light beam receiver
- 3 Signal processing stage
- 4 Output stage

- 1 X rays, 2 Ultraviolet, 3 Visible light,
4 Near infrared, 5 Far infrared

Detection systems**Composition of a photo-electric sensor**

A photo-electric sensor basically comprises a light beam transmitter (light-emitting diode) and a light-sensitive receiver (photo-transistor).

A light-emitting diode is an electronic semi-conductor component that emits light when an electric current flows through it. This light can be visible or invisible, depending on the transmission wavelength.

Detection occurs when an object enters the transmitted light beam and, in so doing, affects the intensity of the light at the receiver. As the light intensity at the receiver decreases a point is reached whereby the output of the sensor changes state.

Light spectrum

Depending on the model and application requirements, the transmission beam is either non visible infrared (most common case) or ultraviolet (detection of luminescent materials). It may also be visible red or green (colour mark reading etc.) and laser red (long sensing distance and short focal length).

Modulation

The advantage of LEDs is their very fast response. To render the system insensitive to ambient light, the current flowing through the LED is modulated so as to produce a pulsed light transmission.

Only the pulsed signal will be used by the photo-transistor and processed to control the load.

Thru-beam system or multimode with thru-beam accessory**Advantages**

- ☐ Long sensing distance (up to 60 m).
- ☐ Very precise detection, high repeat accuracy.
- ☐ Detection not affected by colour of object.
- ☐ Good resistance to difficult environments (dust, grime, etc.).

Drawbacks

- ☐ 2 units to be wired.
- ☐ The object to be detected must be opaque.
- ☐ Precise alignment required, which can be difficult since the sensor transmits in the infrared range (invisible).

Operating precautions

- ☐ When several sensors are used, care must be taken to ensure that no sensor is disrupted by another sensor (e.g. alternate mounting of transmitter/receiver etc.).

Advantages of multimode sensor with thru-beam accessory

- ☐ Easy alignment
- ☐ The sensor transmits in the visible red range during the alignment phase.
- ☐ 3 LEDs providing setting-up assistance.

Polarised reflex system or multimode with reflector accessory**Advantages**

- ☐ Medium sensing distance (up to 15 m).
- ☐ Precise detection.
- ☐ Only one unit to be wired.
- ☐ Detection not affected by colour of object.
- ☐ Visible red beam transmission.

Drawbacks

- ☐ Precise alignment required.
- ☐ The object to be detected must be opaque and larger than the reflector.

Operating precautions

- ☐ When several sensors are used, they must be aligned in such a manner that no sensor is disrupted by another sensor.
- ☐ For short distance detection use a reflector with large trihedrons, type XUZY24.
- ☐ For long distance detection use a reflector XUZY50 or XUZY80.
- ☐ To increase the sensing distance use reflector XUZY100.
- ☐ If reflective tape is used, use rolls of tape XUZYB1 or XUZYB15 which are specially adapted for polarised reflex systems.

Advantages of multimode sensor with reflector accessory

- ☐ Easy alignment
- ☐ 3 LEDs providing setting-up assistance.
- ☐ The anti-interference function enables 2 sensors to be used without specific alignment precautions.
- ☐ Semi-transparent objects can be detected by using the teach mode function.

Detection systems (continued)

Positioning recommendations for sensor with background suppression

Specific systems

(1) Transmission LED
(2) Output LED

1 Core
2 Sheath

Diffuse system or multimode

■ Advantage

- Only one unit to be wired.

■ Drawbacks

- Short sensing distance.
- Sensitivity to object or background colour differences.
- Object sighting line difficult since the sensor transmits in the infrared range (invisible).

■ Operating precautions

- When several sensors are used, they must be aligned in such a manner that no sensor is disrupted by another sensor.

■ Advantages of a multimode sensor

- Easy alignment:
 - the sensor transmits in the visible red range during the alignment phase,
 - 3 LEDs providing setting-up assistance,
 - the anti-interference function enables 2 sensors to be used without specific alignment precautions.
- Refined detection: the position of the object can be detected using the teach mode.

Diffuse, with or without background suppression, system or multimode

■ Advantages

- Only one unit to be wired.
- Detection not affected by colour of object or background.

■ Drawbacks

- Short sensing distance.
- Object sighting line difficult since the sensor transmits in the infrared range (invisible).

■ Operating precautions

- Detection can be affected by the object's direction of movement. To overcome this phenomenon (the hat effect), it is recommended that the sensor is mounted so that the object simultaneously breaks the beam of both lenses.
- When several sensors are used, they must be aligned in such a manner that no sensor is disrupted by another sensor.

■ Advantages of a multimode sensor

- Easy alignment:
 - the sensor transmits in the visible red range during the alignment phase,
 - 3 LEDs providing setting-up assistance,
 - the anti-interference function enables 2 sensors to be used without specific alignment precautions,
 - the hat effect is minimised using the background teach mode.
- Refined detection: the position of the object can be detected using the teach mode.

Optical forks

- Constructed from metal, the optical fork is a robust sensor that is particularly suited to conveying and packaging applications and detection of labels.

- Rugged optical detection device **not requiring alignment** in thru-beam mode.

- The beam from the transmitter limb is transmitted to the receiver limb. Due to its construction, **only one connection** is required as opposed to two for a traditional thru-beam function.

- The transmission sources are LEDs of various technologies:

- Red for much improved efficiency during adjustment and maintenance
- Red laser for detection of transparent materials or very small parts
- Infrared, particularly for optical frames
- Ultrasonic for detection of transparent labels (clear on clear)

- The beam is adjustable or fixed depending on the version. Adjustment enables the sensitivity to be altered and, therefore, detection of small parts down to dimensions of less than tenths of millimetres (minimum size of detectable object: 0.05 mm).

- The high switching frequency (from 4 kHz up to 25 kHz) is very useful in industrial applications involving high operating rates.

Fibre optics

- The fibre acts as a light conductor. Light rays entering the fibre at a certain angle are conveyed to the required location, with minimum loss.

- Separate amplifier.

- Size kept to minimum.
- This system enables detection of very small objects (approximately 1 mm).
- And, detection is very precise.

Plastic fibres

The core of the fibre is flexible plastic (PMMA). In general, there is only a single fibre of diameter 0.25 to 1 mm, depending on the model.

- Fibres are used with amplifiers transmitting red light.
- Minimum bend radius:

- 10 mm for fibres with 0.25 mm diameter core,
- 25 mm for fibres with 1 mm diameter core.

- Advantages: fibres can be cut to the required length.

Glass fibres

- The core of the fibre is silica. For maximum flexibility, each fibre comprises numerous strands that are approximately 50 µ in diameter.

- Fibres are used with amplifiers transmitting infrared or red light.

- Minimum bend radius:

- 10 mm with plastic sheath,
- 90 mm with stainless steel sheath.

■ Advantages

- Fibres suitable for use at high temperatures (250 °C).
- Fibres with stainless steel sheath provide protection against mechanical impact and crushing.

Detection curves

Thru-beam system

- The zone indicates the positioning tolerance of the receiver.
- The zone represents the usable sensing zone of the system. Any opaque object entering this zone breaks the beam and causes the sensor's output to change state.
- 1 Ideal detection
- 2 Acceptable detection
- T = transmitter
- R = receiver

Polarised reflex system

- The zone indicates the positioning tolerance of the reflector.
- The zone represents the usable sensing zone of the system. Any opaque object entering this zone breaks the beam and causes the sensor's output to change state.
- 1 Ideal detection
- 2 Acceptable detection
- T = transmitter
- R = receiver

Diffuse, with or without background suppression, system

- The zone represents the sensor's sensitivity zone.
- All of this zone is usable: any object that is adequately reflective entering this zone, in the direction of the arrow, will cause the sensor's output to change state. The black line corresponds to a light colour surface and the blue line to a darker colour surface.
- A test using the object to be detected will determine the zone of sensitivity in relation to its reflection coefficient.
- White 90% object
- Grey 18% object
- For specific aspects of diffuse systems see page 18.
- T = transmitter
- R = receiver

Excess gain

Operating margin

To ensure correct operation of a sensor in spite of environmental constraints, the sensors feature an operating margin. This margin can be expressed in terms of excess gain, which is the ratio: Excess gain = Signal level received/Signal required for switching.

For all OsiSense XU sensors

- The **nominal sensing distance S_n** is defined as the sensing distance with an **excess gain of 2**, i.e. the sensing distance for which the sensor receives twice as much light energy as it strictly needs to switch it.
- The **maximum sensing distance** is defined as the sensing distance with an **excess gain of 1**. It corresponds to the maximum detection value.

The use of the sensor at the nominal sensing distance ensures the sensor's correct operation in normal operating conditions.

In extreme conditions, refer to the following setting-up recommendations:

- clean environment: work at nominal sensing distance S_n ,
- slightly polluted environment: work at sensing distance $S_n/2$,
- moderately polluted environment: work at sensing distance $S_n/4$,
- heavily polluted environment: preferably use multimode sensors with thru-beam accessory (or the thru-beam system) with a sensing distance $S_n/10$.

Optical alignment aid

Detection distance using reflector

Outputs

2-wire technique ~ or ~

■ Specific aspects

These sensors are wired in series with the load to be switched.

As a consequence, they are subject to:

- A residual current in the open state (current flowing through the sensor in the "open" state),
- A voltage drop in the closed state (voltage drop across the sensor's terminals in the "closed" state).

■ Advantages

- Only 2 wires to be connected. They can be wired in series in the same way as mechanical limit switches.
- For use on 2-wire ~, they can be connected to either positive (PNP) or negative (NPN) logic PLC inputs.
- No risk of incorrect connections.

■ Operating precautions

- Check the possible effects of residual current and voltage drop on the actuator or input connected.
- These sensors do not incorporate overload or short-circuit protection and therefore, it is essential to connect a 0.4 A "quick-blow" fuse in series with the load.

3-wire technique ---

■ Specific aspects

- These sensors comprise 2 wires for the DC supply and a 3rd wire for the output signal.
- PNP type: switching the positive side to the load.
- NPN type: switching the negative side to the load.

■ Advantages

- No residual current, low voltage drop.

5-wire technique ~ or ~, relay output

■ Specific aspects

- Sensors incorporating output relay. The supply and output circuits are electrically separate.

■ Advantages

- ~ or --- supply with a wide voltage range.
- High breaking capacity (approximately 3 A).
- Direct control of a simple automation system.
- Availability of a NC (normally closed) contact and a NO (normally open) contact.
- The sensor/relay contact galvanic isolation is 1500 to 2500 V, depending on the model.

■ Operating precautions

- Low switching frequency. Check that it is suitable for the application.
- Limited service life of relay. Check that it is suitable for the application.

INDUSTRIAL AUTOMATION

Analogue technique

■ Specific aspects

There are two output configurations:

- Voltage output: the output voltage varies in proportion to the distance between the sensor and the object to be detected.
- Current output: the output current varies in proportion to the distance between the sensor and the object to be detected.

■ Advantage

- Availability of a physical item of data proportional to the distance between the sensor and the object to be detected.

■ Operating precautions

- Refer to the detailed descriptions of the sensor to assess the relative influence of the colour of the object to be detected.

- 1 Voltage output
- 2 Current output

Outputs (continued)

Output functions

In the past, the output functions of photo-electric sensors were always governed by the "light/dark" principle, i.e. the output would be activated on light being received for "light" switching and the output would be activated on light not being received for "dark" switching. This called for fastidious programming specific to each detection mode.

Now, the output functions of the OsiSense XU range of photo-electric sensors are in phase with the language of the automation system engineer, i.e. NO (normally open) or NC (normally closed).

Advantages

- NO output (or NO programming for multimode sensors): irrespective of the detection mode, the output of the sensor is activated when the object to be detected is present.
- NC output (or NC programming for multimode sensors): irrespective of the detection mode, the output of the sensor is activated when the object to be detected is not present.

Advantages of multimode sensors

- By default, the output is NO programmed, i.e. the output of the sensor is activated when the object to be detected is present.
- By pressing the teach button, the output can be programmed to NC, i.e. the output of the sensor is activated when the object to be detected is not present.

System		NO output or NO programming	Yellow LED	NC output or NC programming	Yellow LED
Object present					
Diffuse		Activated	On 	Not activated	Off 
Diffuse with background suppression		Activated	On 	Not activated	Off 
Reflex		Activated	On 	Not activated	Off 
Polarised reflex		Activated	On 	Not activated	Off 
Thru-beam		Activated	On 	Not activated	Off 
No object present					
Diffuse		Not activated	Off 	Activated	On 
Diffuse with background suppression		Not activated	Off 	Activated	On 
Reflex		Not activated	Off 	Activated	On 
Polarised reflex		Not activated	Off 	Activated	On 
Thru-beam		Not activated	Off 	Activated	On 

Time delay on beam break

Monostable

Output signal time delay

- Certain sensor models (XUK, XUX and XUD) incorporate a time delay output.
- These time delays enable simple automation systems to be established.
- There are three types of time delay:
 - Time delay on beam make (ON delay).
 - Time delay on beam break (OFF delay).
 - Monostable (one shot).

Connections

All our sensors are available either in pre-cabled version (except XUX; screw terminal with cable gland version) or connector version.

The connectors used are:

M12 (4-pin)

M8 (4-pin)

1/2" 20UNF (3-pin)

Types of connection

- 1 Factory fitted moulded cable: good protection against splashing liquids.
- 2 Connector: easy installation and maintenance.
- 3 Screw terminals: flexibility, cable runs to required length.

Wiring advice

- Length of cable: no limitation up to 200 m or up to a line capacitance of $< 0.1 \mu\text{F}$ (characteristics of sensors remain unaffected). In this case, it is important to take into account the voltage drop on the line.
- Separation of control and power circuit wiring: the sensors are immune to electrical interference encountered in normal industrial conditions. Where extreme conditions of electrical "noise" could occur (motors etc.), it is advisable to protect against transients in the normal way:
 - suppress interference at source and filter the power supply,
 - separate power and control wiring from each other,
 - ensure the HF equipotentiality of the site,
 - limit the length of cable,
 - connect the sensor with supply switched off.
- Dust and damp protection of connections: the level of dust and damp protection depends on how carefully the cable glands or connectors are tightened. To efficiently protect the sensors from dust and damp, select the correct diameter cable for the cable gland used.

Cable gland	Diameter of cable	
	Minimum	Maximum
9P	6	8
11P	8	10
13P	10	12
ISO 16	7	10
ISO 20	10	12

Complementary functions

Diagnostics, beam break test

A test input enables the transmitted beam to be broken in order to verify that the output of the sensor changes state. Fault diagnostics regarding correct operation of the sensor can therefore be carried out.

- 1 Beam made
 - 2 Beam broken
- VI: test input for breaking transmitted beam.

Verification of correct operation

In the event of dirty lenses (reflectors), an excessively polluted atmosphere or a slight disturbance of optical alignment (mechanical impact on support), the level of light energy received by the sensor will decrease until it ceases to operate.

To overcome this problem, all our products incorporate:

- a red alarm LED,
- an alarm output, for connection in the automation system, to warn the operator that the operation of the sensor is stable but close to its limits (applies to sensors XUK, XUX, XUD).

Specific aspects of electronic sensors

Terminology

Residual current (Ir)

- The residual current (Ir) corresponds to the current flowing through the sensor when in the "open" state.
- Characteristic of 2-wire type sensors.

Voltage drop (Ud)

- The voltage drop (Ud) corresponds to the voltage drop at the sensor's terminals when in the "closed" state (value measured at nominal current rating of sensor).
- Characteristic of 2-wire type proximity sensors.

First-up delay

The first-up delay corresponds to the time (t) between the connection of the power supply to the sensor and its fully operational state.

- 1 Supply voltage U on
- 2 Sensor operational at state 1
- 3 Sensor at state 0

Response time

- Response time (Ra): the time delay between the object to be detected entering the sensor's operating zone and the subsequent change of output state. This parameter limits the speed and size of the object.
- Recovery time (Rr): the time delay between an object to be detected leaving the sensor's operating zone and the subsequent change of output state. This parameter limits the interval between successive objects.

Power supplies

Sensors for AC circuits (~ and ~ models)

Check that the voltage limits of the sensor are compatible with the nominal voltage of the AC supply used.

Sensors for DC circuits (— models)

- DC source: check that the voltage limits of the sensor and the acceptable level of ripple are compatible with the supply used.
- AC source (comprising transformer, rectifier, smoothing capacitor): the supply voltage must be within the operating limits specified for the sensor.
- Where the voltage is derived from a single-phase AC supply, the voltage must be rectified and smoothed to ensure that:
 - the peak voltage of the DC supply is lower than the maximum voltage rating of the sensor.
Peak voltage = nominal voltage $\times \sqrt{2}$
 - the minimum voltage of the supply is greater than the minimum voltage rating of the sensor, given that:
 $\Delta V = (I \times t) / C$
 $\Delta V = \text{max. ripple: } 10\% (V)$,
 $I = \text{anticipated load current (mA)}$,
 $t = \text{period of 1 cycle (10 ms full-wave rectified for a 50 Hz supply frequency)}$,
 $C = \text{capacitance } (\mu F)$.
- As a general rule, use a transformer with a lower secondary voltage (Ue) than the required DC voltage (U).

Example: ~ 18 V to obtain — 24 V, ~ 36 V to obtain — 48 V. Fit a smoothing capacitor of 400 μF minimum per sensor, or 2000 μF minimum per Ampere required.

Setting-up

Connection in series

2-wire type sensors

- The following points should be taken into account:

- Series wiring is only possible using sensors with wide voltage limits.

Based on the assumption that each sensor has the same residual current value, each sensor, in the open state, will share the supply voltage, i.e.

$$U_{\text{sensor}} = \frac{U_{\text{supply}}}{n_{\text{sensors}}}$$

U_{sensor} and U_{supply} must remain within the sensor's voltage limits.

- If only one sensor in the circuit is in the open state, it will be supplied at a voltage almost equal to the supply voltage.
- When in the closed state, a small voltage drop is present across each sensor. The resultant loss of voltage at the load will be the sum of the individual voltage drops and therefore, the load voltage should be selected accordingly.

3-wire type sensors

This connection method is not recommended.

- Correct operation of the sensors cannot be assured and, if this method is used, tests should be made before installation.

- The following points should be taken into account:

- The first sensor carries the load current in addition to the no-load current consumption values of the other sensors connected in series. For certain models, this connection method is not possible unless a current limiting resistor is used.

- When in the closed state, a small voltage drop is present across each sensor. The load should therefore be selected accordingly.
- As sensor 1 closes, sensor 2 does not operate until a certain time (t) has elapsed (corresponding to the first-up delay) and likewise for the following sensors in the sequence.
- The use of "flywheel" diodes is recommended when an inductive load is being switched.

Wiring sensors to devices with mechanical contact

2 and 3-wire type sensors

- The following points should be taken into account:

- When the mechanical contact is open, the sensor is not supplied.

- When the contact closes, the sensor does not operate until a certain time (t) has elapsed (corresponding to the first-up delay).

- In scheme 1, as the external contact opens, the voltage transient caused by the breaking of the inductive load will appear inside the sensor and, if greater than the recommended max. insulation voltage, may cause a "flashover" within the sensor.

- The return path of this voltage will be back to one line of the supply, through the sensor, and should "flashover" occur anywhere on the printed circuit board, severe damage could occur.
- It is therefore recommended to use schemes 2 or 3.

Connection in parallel

2-wire type sensors

This connection method is not recommended.

- Should one of the sensors be in the closed state, the sensor in parallel will be "shorted-out" and no longer supplied. As the first sensor passes into the open state, the second sensor will become energised and will be subject to its first-up delay.

- This configuration is only permissible where the sensors will be working alternately.
- This method of connection can lead to irreversible damage of the units.

3-wire type sensors

- No specific restrictions. The use of "flywheel" diodes is recommended when an inductive load (relay) is being switched.

Wiring sensors to devices with mechanical contact

2 and 3-wire type sensors

- No specific restrictions.

- For these sensors, the supply and output circuits are electrically separate.

- The sensor/relay contact galvanic isolation is 1500 to 2500 V, depending on the model.

- The maximum voltage, depending on the model, across each contact is ~ 250 V.

Setting-up precautions (continued)

AC supply

■ 2-wire type sensors cannot be connected directly to an AC supply.

- This would result in immediate destruction of the sensor and considerable danger to the user.
- An appropriate load (refer to the instruction sheet supplied with the sensor) must always be connected in series with the sensor.

Capacitive load ($C > 0.1 \mu\text{F}$)

- On power-up, it is necessary to limit (by resistor) the charging current of the capacitive load C.
- The voltage drop in the sensor can also be taken into account by subtracting it from the supply voltage for the calculation of R.

$$R = \frac{U \text{ (supply)}}{I \text{ max. (sensor)}}$$

Load comprising an incandescent lamp

- If the load comprises an incandescent lamp, the cold state resistance can be 10 times lower than the hot state resistance. This can cause very high current levels on switching. Fit a pre-heat resistor in parallel with the sensor.

$$R = \frac{U^2}{P} \times 10, U = \text{supply voltage and } P = \text{lamp power}$$

INDUSTRIAL AUTOMATION

Fast trouble shooting guide

Problem	Possible causes	Remedy
The sensor's output will not change state when an object enters the operating zone	On multimode sensor: setting-up error (detection mode programming)	■ Use the detection mode display option. After a RESET, follow the environment teach mode procedure.
	Output stage faulty or complete failure of the sensor (in either case, the sensor must be replaced), or the short-circuit protection has tripped.	■ Check that the sensor is compatible with the supply being used. ■ Check the load current characteristics: □ if load current $I \geq$ maximum switching capacity, an auxiliary relay, of the CAD N type for example, should be interposed between the sensor and the load. □ if $I \leq$ maximum switching capacity, check or wiring faults (short-circuit). ■ In all cases, a 0.4 A "quick-blow" fuse should be fitted in series with the sensor.
	Wiring error	■ Check that the wiring conforms to the wiring shown on the sensor label or instruction sheet.
	Supply fault	■ Check that the sensor is compatible with the supply ($\sim$ or ---). ■ Check that the supply voltage is within the voltage limits of the sensor. Remember that with a rectified, smoothed supply, ■ ($U_{\text{peak}} = U_{\text{nominal}} \times \sqrt{2}$ with a ripple voltage of $\leq 10\%$).
	With a reflex system: incorrect use or poor state of reflector	■ The reflex system must operate in conjunction with a reflector. Adhere to the operating distances and check the alignment between the sensor and the reflector. ■ Replace the reflector if it has been damaged. ■ Clean the reflector and sensor lenses.
	Influence of ambient light	■ Make sure that the sensor is not dazzled by stray light (neon, sun, oven, etc.). ■ Fit a lens hood or turn the sensor.
False or erratic operation, with or without the presence of an object in the operating zone	On multimode sensor: setting-up error (detection mode programming)	■ Use the detection mode display option. After a RESET, follow the environment teach mode procedure.
	Influence of background or surface condition of the object to be detected (stray reflections)	■ Refer to the instruction sheet supplied with the sensor. For sensors with adjustable sensitivity, reduce or increase the sensing distance.
	Operating distance poorly defined for the reflector or object to be detected	■ Apply the correction coefficients. ■ Realign the system. ■ Clean the sensor lenses and reflector, or, if damaged, replace it.
	Influence of immediate environment	■ Check the cleanliness of the lenses and reflector. ■ Fit a lens hood, where required.
	Influence of transient interference on the supply lines	■ Ensure that any DC supplies, when derived from rectified AC, are correctly smoothed ($C > 400 \mu\text{F}$). ■ Separate AC power cables from low-level DC cables (--- 24 V low level). ■ Where very long distances are involved, use suitable cable: screened and twisted pairs of the correct cross-sectional area.
	Equipment prone to emitting electromagnetic interference	■ Position the sensors as far away as possible from any sources of interference.
	Response time of the sensor too slow for the particular object being detected	■ Check the suitability of the sensor for the position or shape of the object to be detected. ■ If necessary, select a sensor with a higher switching frequency.
	Influence of high temperature	■ Eliminate sources of radiated heat or protect the sensor casing with a heat shield. ■ Realign, having adjusted the temperature around the fixing support.
	Influence of ambient light	■ Make sure that the sensor is not disrupted by a intermittent source of light (flashing light, rotating mirror beacon, hinged mirror, reflective door, etc.). ■ Fit a lens hood or turn the sensor.

Fast troubleshooting guide (continued)

Problem	Possible causes	Remedy
No detection following a period of service	Vibration, shock	■ Realign the system ■ Replace the support or protect the sensor.
	Deterioration of relay contact	■ On an inductive load, use an RC suppressor connected in parallel with the load. ■ To eliminate contact contamination, the minimum current recommended is 15 mA. ■ Relay output models are not recommended for fast counting of objects since their service life is too short. Use models with a solid-state output.
	Dusty atmosphere	■ Clean the lenses and reflector with a soft cloth.

Notes:

- **Sensors with a test input** enable automatic verification of their correct operation.
- **Sensors with an alarm output** enable the operator to be informed, for preventive maintenance purposes, that the operating limits of sensors have been reached (dirty etc.).

(1) For pre-cabled version

OsiSense XU, general purpose, single mode function
Miniature design, plastic
Three-wire DC, solid-state output
NO/NC configuration switch

Characteristics			
Sensor type		XUM●A●●●M8	XUM●A●●●L2
Product certifications		CE, cULus, CTick	
Connection	Connector	M8	–
	Pre-cabled	–	Length: 2 m
Nominal sensing distance Sn (excess gain = 2)		m	1 diffuse with adjustable sensitivity
		m	5 polarised reflex with adjustable sensitivity
		m	15 thru-beam with adjustable sensitivity
Type of transmission		Red, except diffuse system (Infrared)	
Degree of protection		Conforming to IEC 60529 IP 65, IP 67	
Storage temperature		°C - 40...+ 70	
Operating temperature		°C - 30...+ 60	
Materials	Case	PBT	
	Lens	PMMA	
	Cable	– PVC (black for transmitter, grey for other versions)	
Vibration resistance	Conforming to IEC 60068-2-6	10 to 55 Hz, amplitude ± 1.5 mm, 2 hours in each direction X, Y and Z	
Shock resistance	Conforming to IEC 60068-2-27	500 m/s² 10 x in each direction X, Y and Z	
Indicator lights	Output state	Orange LED (excluding transmitter)	
	Stability	Green LED	
	Transmitter	Orange LED: supply on	
	Receiver	Red LED: light received; green LED: supply on	
Rated supply voltage		V --- 12...24 with protection against reverse polarity	
Voltage limits (including ripple)		V --- 10...30	
Current consumption, no-load		mA 16 for XUM5; 13 for XUM9; 11 for transmitter XUM2; 13 for receiver XUM2	
Switching capacity		mA ≤ 100 with overload and short-circuit protection	
Voltage drop, closed state		V ≤ 3	
Maximum switching frequency		Hz 1000	
Delays	First-up	ms < 100	
	Response	ms 0.5	
	Recovery	ms 0.5

Response time		≤ 1 ms	

Function table	Function	Diffuse system	
		No object present in the beam	Object present in the beam
State of output (PNP or NPN) and orange LED (illuminated when sensor output is ON)	NO (position L)		
	NC (position D)		

Detection curves

Variation of usable sensing distance

OsiSense XU, general purpose
With adjustable background and foreground
suppression
DC supply. Solid-state output

Detection curves

Adjustment ranges in background or foreground suppression mode

- 1 Background suppression (on minimum setting)
- 2 Background suppression (on maximum setting)
- 3 Foreground suppression (on minimum setting)
- 4 Foreground suppression (on maximum setting)

Adjustment in background or foreground suppression mode

Cabling of pink wire determines the detection mode:

- Background detection mode, pink wire not connected to 0 V (blue wire)
- Foreground detection mode, pink wire connected to +V (brown wire)

Function	Cabling	Application
Background suppression	Pink wire to 0 V	To detect the object when it is detached from the background.
Foreground suppression	Pink wire to +V	To detect the object when it is in contact with the background or to suppress a foreground.

Dimensions

XUM8APCNL2, XUM8ANCNL2 and XUM8APCNL03M12

R: Reception, T: Transmission

XUM8APCNM8 and XUM8ANCNM8

Mounting

(1) XUZA50, XUZA02 or XUZA03 metal bracket (see page 34).

Functions

Selector switch	Function	Description
NO (position L)		The NO output is activated when the selector switch is turned fully clockwise.
NC (position D)		The NC output is activated when the selector switch is turned fully anticlockwise.

Wiring schemes (3-wire ---)

Note: These schemes are represented in "background suppression" mode, cabling of pink (PK) wire to 0 V.

CÔNG TY CỔ PHẦN CÔNG NGHỆ HỢP LONG

Photo-electric sensors

OsiSense XU

Optical fork without adjustment
DC supply. Solid-state output

Characteristics		XUVR●	XUVA
Product certifications		CE, UL, CSA	CE
Ambient air temperature	For operation	- 10...+ 60 °C	
	For storage	- 40...+ 80 °C	
Degree of protection	Conforming to IEC 60529	IP 65 and IP 67	
Vibration resistance	Conforming to IEC 60068-2-6	7 gn, amplitude ± 0.75 mm (f = 10 to 55 Hz)	
Shock resistance	Conforming to IEC 60068-2-27	30 gn, duration 11 ms	
Materials	Case	Painted aluminium and polyamide	
Rated supply voltage		12...24 V with protection against reverse polarity	
Voltage limits (including ripple)		10...30 V	
Immunity to ambient light	Natural light	10 000 lux	
	Incandescent bulb	5000 lux	
Switching capacity		100 mA with overload and short-circuit protection	
Voltage drop, closed state		< 1.5 V	
Current consumption, no-load		< 20 mA	
Maximum switching frequency		4000 Hz	
Delays	First-up	140 ms max.	
	Stability	± 15 µs	
Indicator lights	Yellow LED	Output signal

Characteristics

Product certifications	CE, cULus. This product is UL Listed if supplied by a class II or isolated supply delivering --- 30 V max. (isolated transformer for example) and protected by a UL fuse rated at 3 A max.	
Ambient air temperature	For operation	- 20...+ 60 °C
	For storage	- 30...+ 80 °C
Degree of protection	Conforming to IEC 60529	IP 65
Connection	M8, 4-pin male connector (for 3-pin version please consult our Customer Care Centre)	
Vibration resistance	Conforming to IEC 60068-2-6	7 gn, amplitude ± 0.75 mm (f = 10 to 55 Hz)
Shock resistance	Conforming to IEC 60068-2-27	30 gn, duration 11 ms
Materials	Case	Painted aluminium and polyamide/glass
Rated supply voltage	--- 12...24 V with protection against reverse polarity	
Voltage limits (including ripple)	--- 10...30 V	
Immunity to ambient light	Natural light	10 000 lux
	Incandescent bulb	5000 lux
Outputs	PNP and NPN	By independent wire
	NO/NC	By programming
Switching capacity	100 mA with overload and short-circuit protection	
Voltage drop, closed state	< 2 V	
Current consumption, no-load	40 mA	
Permissible capacitive load	330 nF	
Maximum switching frequency	10 kHz	
Response time	Stability	+/- 20 µs
Indicator lights	Yellow LED	Output signal
	Red LED	Adjustment mode and keypad locking

Application: Detection of labels, detection of double sheet, detection of reference marks, detection on conveyor, detection on vibrating rail.

Weight (kg)	0.120		

Characteristics

Product certifications		CE
Ambient air temperature		For operation: 0...+ 55 °C. For storage: - 20...+ 70 °C
Vibration resistance	Conforming to IEC 60068-2-6	Amplitude ±1.5 mm up to 55 Hz, 7 gn (f = 10...55 Hz)
Shock resistance	Conforming to IEC 60068-2-27	30 gn, duration 11 ms
Degree of protection	Conforming to IEC 60529	IP 65
Connection		M8 connector (suitable female connectors)
Materials		Case: zinc alloy; lenses: glass
Rated supply voltage		--- 12...24 V with protection against reverse polarity
Voltage limits		--- 10...30 V (including ripple)
Switching capacity (sealed)		≤ 100 mA with overload and short-circuit protection
Voltage drop, closed state		≤ 1.5 V
Output clamping resistor		10 kΩ
Current consumption, no-load		≤ 50 mA
Maximum switching frequency		25 kHz
Delays		First-up: ≤ 30 ms; response < 100 μs; recovery < 100 μs
Indicator lights	Output state	Yellow LED
	Sensor ready	Green LED
	Read error	Red LED

Function table	Function	Thru-beam system			
		No label present in the beam		Label present in the beam	
Output state (PNP or NPN) indicator: yellow LED (illuminated when sensor output is ON)	NC				
	NO				

(1) Applications: the infrared transmission beam sensor XUVK0252S is suitable for the detection of all types of opaque labels; the red/green transmission sensor XUVK0252VS is suitable for the detection of all types of labels of different colours.

(2) This sensor is adjustable using teach mode: the NC or NO function is selected when performing the first stage of teaching for setting-up the sensor (see programming using teach mode, page 67).

Presentation

Programming using teach mode

- Place the label to be detected in the beam of the optical fork. Press the SET button and hold down until the green LED 2 goes out,
- When the green LED 2 flashes, the detector has "learnt" the label. Following this, place the backing to which the label is affixed in the beam of the optical fork. Press the SET button and hold down until the green LED 2 goes out,
- When the green LED 2 illuminates as a steady light teaching is completed and the sensor is ready for operation.

- 1 Yellow LED, output state indicator
- 2 Dual colour green/red LED, Ready/Error
- 3 Teach mode programming SET button
- 4 Locking screw

(1) XUVF●● sensors are suitable for detecting the passage of all types of objects (both metal and plastic), of any shape and colour.

XUVF120M12, XUVF180M12 and XUVF250M12 frames can be used:

- In dynamic mode for counting parts or monitoring the passing of parts on injection moulding machines.

- In static mode for detecting bar or cable type moving or non-moving parts, entering machines (maintain the signal).

(2) The min. value only applies to dynamic mode.

OsiSense XU Application, conveying series
Dynamic/static detection of passage of objects
For detecting and counting parts
DC supply. Solid-state output

Presentation

- 1 Sensitivity adjustment potentiometer
- 2 Time delay adjustment potentiometer (XUV only)
- 3 Indicators:
 - Orange LED:
 - For XUVF30M8 and XUVF60M8: object in the beam
 - For XUVF120M12, XUVF180M12, XUVF250M12, XUVFRS120S, XUVFRS180S and XUVFRS250S: closed state of the contact
 - Red LED: solid state output overload or short-circuit (flashing)
- 4 Notes concerning XUVF30M8 and XUVF60M8:
 - In the event of a supply malfunction, the red LED flashes
 - In the event of a short-circuit on the output, both the red and orange LEDs flash
- 4 Dynamic mode (NO or NC) or static mode (NO or NC) selector switch

Characteristics

Product certifications		CE, cULus
Ambient air temperature	For operation	- 10...+ 55 °C
	For storage	- 20...+ 70 °C
Vibration resistance	Conforming to IEC 60068-2-6	7 gn, amplitude ± 0.5 mm (f = 10...55 Hz for each axis)
Shock resistance	Conforming to IEC 60068-2-27	30 gn, duration 11 ms, 6 shocks on each axis
Degree of protection	Conforming to IEC 60529	IP 65
Connection		M12, 8-pin connector; can be set at 90°
Materials	Case	ABS
	Lenses	Glass (window tilted, anti-reflective glass)
Spot diameter		At 20 mm: Ø 4 mm
Adjustment	Teach mode	Teaching using SET (adjustment) and SEL (Selection) buttons
	Operating mode	C (colour) or C+I (colour + intensity), independent for each channel
	Tolerance level	Selectable tolerance for varying shades of colour from TOL 0 to TOL 9
Auxiliary functions		External synchronisation, locking
Indicator lights and display	Display	4-digit
	Output active	3 green LEDs: output 1, 2 or 3
	Output state "OUT"	Yellow LED if one output (1, 2 or 3) activated
Rated supply voltage		12...24 V
Voltage limits		10...30 V (including ripple)
Switching capacity (sealed)		≤ 100 mA with protection against reverse polarity, overload and short-circuit
Voltage drop, closed state		≤ 2 V
Current consumption, no-load		≤ 60 mA
Maximum switching frequency		1.5 kHz
Delay		335 µs for response and recovery
Time delay		Selectable (5, 10, 20, 30 or 40 ms)

Function table for each channel (3 channels)	Colour recognised by sensor	Colour not recognised by sensor
NO function		
Output state (PNP or NPN) indicator (illuminated when sensor output is ON)		

(1) Applications: OsiSense XU "Full colour" is a colour sensor that can recognise up to 3 colours. It can be used to sort objects by colour or to monitor colours, and is insensitive to surface finishes (matt or reflective), as well as ambient lighting. The sensor is suitable for use in many industrial sectors, such as packaging machines, printing machines, etc.

Description

XUYBCO929LSP

- 1 Teach In (T.I.)
- 2 Yellow LED: Detection LED (1)
- 3 Green LED: Supply on or fault due to accumulation of dirt (if LED off)

- **Teach mode** (yellow and green LEDs are on)
 - Line up with reflector, press T.I. for 3 seconds: both LEDs flash
 - Insert the object, press T.I. for 1 second: the green LED flashes then remains on (teaching completed).

XUYPSCO929L•SP, XUYPPCO929LSP

- 1 Teach In (T.I.)
- 2 Yellow LED: Detection LED (2)
- 3 Green LED: Supply on or fault due to accumulation of dirt (if LED off)

- **Teach mode** (yellow and green LEDs are on)
 - Line-up with object, press T.I. for 3 seconds: both LEDs flash
 - Insert the object, press T.I. for 1 second: the green LED flashes then remains on (teaching completed)

R: Receiver
T: Transmitter

- NO/NC** ■ Press T.I. for 13 seconds: the two LEDs alternatively flash (on the release of T.I., the green LED remains on).
■ Each press on T.I. changes the output state (NO, NC, NO, NC, ...). When T.I. is not pressed for 10 seconds, the green LED goes off: the selected state is memorised.

(1) Whether the output is direct or inverse, the "detection" LED goes off only on beam break.

(2) Whether the output is direct or inverse, the "detection" LED comes on only when an object is present.

Dimensions

XUYBCO929LSP, XUYPSCO929L•SP

- (1) 2 elongated holes $\varnothing 3.2 \times 4.2$.
(2) Transmitter optical axis.
(3) Receiver optical axis.

Wiring schemes

Pre-cabled

- (1) - Connected to +: external teaching,
- Connected to -: locking of functions
(2) Output 100 mA max.

M8 connector

Pin n° - colour

- 1 BN: Brown
2 WH: White
3 BU: Blue
4 BK: Black

Application examples

Detection of pharmaceutical ampoules

Detection of connection tags on integrated circuits passing on rail

Compact design

Characteristics

Product certifications	CE, cCSAus
Type of transmission	Infrared
Operating mode	Diffuse
Nominal sensing distance	100 mm (white paper)
Differential travel	< 25%
Degree of protection	Conforming to IEC 60529 IP 50 (IP 65 on request)
Ambient air temperature	For operation - 10...+ 55°C For storage - 20...+ 80°C
Vibration resistance	Conforming to EN/IEC 60068-2-8 For X, Y and Z: 1 mm from 10 to 42 Hz 7 gn from 42 to 55 Hz 30 mm at resonant frequency or 55 Hz
Shock resistance	Conforming to EN/IEC 60068-2-27 For X, Y and Z: 10 gn for 11 ms
Material	Case Aluminium and PA Lenses PC
Rated supply voltage	24 V with protection against reverse polarity
Voltage limits (including ripple)	18...30 V of rated operational voltage
Switching capacity	100 mA with overload and short-circuit protection
Voltage drop, closed state	≤ 2 V
Current consumption	≤ 35 mA
Maximum switching frequency	500 Hz
Delay	1 ms response 1 ms recovery
Indicator lights	Output state 1 yellow LED
Detection accuracy	2 mm at 2 m/s

(1) These sensors are suitable for use on a 473-477 mm wide conveyor frame (-1, + 3 mm). Other possible widths are given on the next page.

DC supply, solid-state output

Mounting

Mounting on the sides, with XUZASY01H or XUZASY01A hexagonal supports
(2 of each support are supplied with the sensor)

Mounting underneath (brackets, screws and nuts not supplied)

Mounting precautions

Recommended mounting

Not recommended

(1) $S_n \leq 100 \text{ mm}$.

Application example

Package detection - sensor mounted between motorized rollers

Curves

Detection curve (set to infinity)

Excess gain curve

Operating precautions

Laser class 1, conforming to IEC 60825-1.

Adjustment

Standard curve

Detection limit curve

The adjustment of the focusing point enables the detection of objects down to a size of < 0.2 mm.

After slackening the fixing screws 1, adjust the focusing point of the laser beam by rotating the serrated sleeve 2 located on the face of the sensor. Re-tighten fixing screws.

Note: fixing bracket **XUZA218** with ball-joint and, in particular, bracket **XUZA318** with precise micrometric adjustment and locking by 6 screws, are specially suited for mounting the sensor and adjusting beam alignment when the sensing range is several tens of metres (see page 164).

Compact design

System		Diffuse
Type of transmission		Infrared
Nominal sensing distance (Sn)		20...80 cm
References		
3-wire	PNP	XUJK803538
Weight (kg)		0.200
Characteristics		
Product certifications		CE, CSA, UL
Ambient air temperature	For operation	- 25...+ 60 °C
	For storage	- 40...+ 80 °C
Vibration resistance	Conforming to IEC 60068-2-6	7 gn, amplitude ± 1.5 mm (f = 10...55 Hz)
Shock resistance	Conforming to IEC 60068-2-27	20 gn, duration 11 ms
Degree of protection	Conforming to IEC 60529	IP 67
	Conforming to NF C 20-010	IP 671
Connection		Screw terminals, maximum capacity: 2 x 1.5 mm ² or 1 x 2.5 mm ²
Materials		Case: PEI (2)
Rated supply voltage		--- 24 V with protection against reverse polarity
Voltage limits (including ripple)		--- 20...30 V
Output current	Maximum	20 mA
	Minimum	4 mA
Output voltage (Vs)		--- 0...10 V
Output voltage drift in relation to temperature		< 10% between - 25 and + 60 °C
Output voltage drift in relation to object colour		< 10%
Current consumption, no-load		≤ 35 mA
Maximum switching frequency		10 Hz (for an output voltage variation of 1 V)
Delays	First-up	≤ 150 ms
Indicator light		The brightness of the LED is proportional to the output voltage

(1) Applications: position control, monitoring concentricity or eccentricity, closed loop regulation, monitoring displacement, etc.

(2) PEI: high quality synthetic resin providing excellent withstand to mechanical shocks, vibration and the effects of external agents frequently encountered in industry: alcohol, salts, petroleum, oils, greases, washing agents (diluted sodium carbonate 4%, nitric acid 2%), formaldehyde vapour, splashing lactic acid, etc.

Diffuse system

Current output

Voltage output

Load characteristics

- Output current: the output current varies between 4 and 20 mA depending on the distance of the object and therefore, the load must be less than 1 k Ω .
- Voltage output: since the minimum rated output current of the sensor is 10 mA, the load must always have a resistive value of more than 1 k Ω .

Terminal connections

XUYPS2945S, XUYPS2CO945S

Rear view

- 1 Adjustment of zone A detection distance
 - 2 Adjustment of zone B detection distance
 - 3 Pre-cabled connection (XUYPS2945S) or M8 connector (XUYPS2CO945S)
 - 4 On in direct mode
 - 5 Illuminates when the "exclusive OR" function between the two zones A and B is obtained
 - 6 On when the object is present in zone B
 - 7 On when the object is present in zone A
 - 8 Illuminates when the "AND" object logic function between the two zones A and B is obtained
 - 9 Indicates time delay mode
- Simultaneously on when the "OR" logic function between the 2 zones A or B is obtained

Description (4 operating modes)

Two independent sensors with triangulation: A, B

Immunity to reflection: A and B

Detection of contrasting objects: A or B

Monitoring of distance: A xor B

Dimensions

XUYPS2945S, XUYPS2CO945S

Detection curves (typical)

XUYPS2945S, XUYPS2CO945S

- 1 Black 6%
- 2 Grey 18% - Distance (mm) set on 92% (Kodak 1527795)

(1) Optical axis.

INDUSTRIAL AUTOMATION

Characteristics			
Sensor type		XUDA1●●SMM8, XUDA2●●SMM8	XUDA1●●SML2, XUDA2●●SML2
Product certifications		CE, cULus	
Connection	Connector	M8	—
	Pre-cabled	—	Length: 2 m
Sensing distance (Sn)		Depending on fibre used, see page 134. Sensing distance halved for XUDA2 configured for fast frequency	
Sensitivity adjustment		Teach mode on XUDA1 , Teach mode and fine adjustment (+/- button) plus 4-digit screen on XUDA2	
Type of transmission		Red	
Degree of protection		Conforming to IEC 60529 IP 65 with Ø 2 mm fibre (IP 64 with Ø 1 mm fibre)	
Storage temperature		°C - 30...+ 70	
Operating temperature		°C - 10...+ 55	
Vibration resistance		Conforming to IEC 60068-2-6 7 gn, amplitude ± 0.5 mm (f = 10 to 55 Hz)	
Shock resistance		Conforming to IEC 60068-2-27 30 gn, duration 11 ms	
Indicator lights	Output state	Yellow LED	
	Stability	Red LED for XUDA1	
	Stability	Green LED for XUDA2	
Signal level		By 7 segment/4-digit display for XUDA2	
Rated supply voltage		V — 12...24 with protection against reverse polarity	
Voltage limits (including ripple)		V — 10.8...26.4	
Current consumption, no-load		mA ≤ 50	
Switching capacity		mA ≤ 100 with overload and short-circuit protection	
Alarm output		mA ≤ 50 for XUDA2 with overload and short-circuit protection	
Protection against mutual interference		Yes for XUDA2	
Voltage drop, closed state		V ≤ 2 for XUDA●P●●●●● , ≤ 1 for XUDA●N●●●●●	
Maximum switching frequency		kHz 1 kHz for XUDA1 , 1 or 5 kHz configurable for XUDA2	
Output time delay		ms 0 or 40 on recovery for XUDA2	
Delays	First-up	ms < 120	
	Response	ms < 0.5 (0.1 for XUDA2 in fast frequency mode)	
	Recovery	ms < 0.5 (0.1 for XUDA2 in fast frequency mode)

(1) Fibre trimmer included

(2) Indication of level by bargraph, adjustment by pressing button

(3) Fine mode or standard mode, adjustment using teach

Characteristics

Sensor type		XUYAF●9●6S	XUYAFCO9●6S
Product certifications		CE, cULus (4)	
Connection	Connector	—	M8, 4-pin
	Pre-cabled	Length: 2 m	—
Nominal sensing distance (Sn)		Depending on fibre optic used	
Type of transmission		Red LED	
Modulation frequency		8 kHz	
Sensitivity adjustment		Using teach (fine mode or standard mode) and/or +/- button, depending on model	
Degree of protection		IP 65	
Ambient air temperature	For storage	°C	- 20...+ 80
	For operation	°C	0...+ 60
Materials		Polycarbonate	
Immunity to ambient light	Incandescent bulb	Lux	10 000
	Natural light	Lux	20 000
Rated supply voltage		V $\overline{\text{---}}$ 12...24 with protection against reverse polarity	
Voltage limits (including ripple)		V $\overline{\text{---}}$ 10...30	
Current consumption, no-load		mA < 40	
Switching capacity		mA 100 with overload and short-circuit protection	
Voltage drop, closed state		V < 2	
Maximum switching frequency		kHz < 1	
External input (5)	Active	V	< 1.4
	Inactive	V	> 3
Delays		ms < 0.5	
Output time delay (5)	Range	s	0...5 in 11 adjustment increments
	Duration of each increment	ms	First increment 40 ms then 500 ms for each press

(4) This product is UL Listed if supplied by a class II or isolated supply delivering $\overline{\text{---}}$ 30 V max. (isolated transformer for example) and protected by a UL fuse rated at 3 A max.

(5) Only for models with teach mode.

■ Applications using plastic fibre optics

- Monitoring position or presence of parts on an assembly or packing machine
- Detection of objects on small conveyor
- Use of fibre optics in vibratory environments (robot arms)
- Detection of reference and colour marks in packaging

■ Applications with glass fibre optics

- Monitoring position or presence of parts on an assembly or packing machine
- Detection of presence of parts in a plastic mould
- Detection in aggressive environments
- Detection of items exiting an oven (high temperature fibres)

Characteristics

Product certifications		CE, Special H7 version: UL, CSA
Ambient air temperature	For operation	- 25...+ 60 °C
	For storage	- 40...+ 80 °C
Vibration resistance	Conforming to IEC 60068-2-6	7 gn, amplitude ± 2 mm (f = 10...55 Hz)
Shock resistance	Conforming to IEC 60068-2-27	20 gn, duration 11 ms
Degree of protection	Conforming to IEC 60529	IP 65
	Conforming to NF C 20-010	IP 651
Connection	Pre-cabled	Diameter 6 mm, length 2 m (1), wire c.s.a.: 2 x 0.34 mm ²
	Connector	1/2"-20UNF
Materials	Case	ABS/PC
	Lenses	PMMA
	Cable	PVC
Rated supply voltage		~ or --- 24...240 V
Voltage limits		~ or --- 20...264 V
Switching capacity (2)	Sealed	~ 12 or --- 12 (resistive load): 0.5 A/240 V
		~ 140 (inductive load): 0.3 A/240 V
		--- 13 (inductive load): 0.1 A/240 V; 0.2 A/110 V; 0.5 A/48 V
Inrush		5 mA
Voltage drop, closed state		3000 mA
Residual current, open state		≤ 3 V (I = 0.1...0.5 A); ≤ 5.5 V (I = 10 mA); ≤ 10 V (I = 5 mA)
Maximum switching frequency		≤ 1.7 mA (on ~); ≤ 1.5 mA (on ---)
Delays	First-up	20 Hz
	Response	≤ 300 ms
	Recovery	≤ 20 ms

Function table	Function	Reflex system		Function	Diffuse system	
		No object present in the beam	Object present in the beam		No object present in the beam	Object present in the beam
Output state indicator (illuminated when sensor output is ON)	NC			NO		
	NO			NC		

(1) For a sensor with a 5 m long cable add **L05** to the end of the reference; for a 10 m long cable add **L10** to the end of the reference.

Example: sensor **XULA06021** with 5 m cable becomes **XULA06021L05**

(2) These sensors do not incorporate overload or short-circuit protection and therefore, it is strongly advised to connect a "quick-blow" fuse in series with the load (see page 165).

■ Applications

- ☐ Detection of belt breakage
- ☐ Material handling
- ☐ Access control

Description, dimensions, schemes

Photo-electric sensors
 OsiSense XU Application
 Conveying and access control series
 Compact design with teach mode adjustment
 Five-wire AC or DC, 1 CO relay output
 Three-wire DC, solid-state output

Description

Rear view

Indicator lights

- 1 - Output signal: Green LED
- 2 - Dirty optics: Red LED
- 3 - Limit of detection: Red LED
- 4 - Alignment assistance: flashing red LED
- 5 - Activation/adjustment of time delay: Red LED
- 6 - Action keypad
- 7 - Keypad: Action/Locking

Controls

- 5 - Automatic adjustment of threshold
- 6 - Access to special functions
- 7 - Zero reset of time delay
- 8 - Sensitivity increase
- 9 - NO/NC programming
- 10 - Time delay increase
- 11 - Sensitivity decrease
- 12 - Inversion of time delay setting: On-delay, Off-delay
- 13 - Time delay decrease
- 14 - Access to terminals

Note: Both the red and green LEDs flash in the event of a short-circuit on the output (for XUY●95●S and XUYB●95●S versions).

Dimensions

Sensors XUY●95●S and XUY●95●R

- (1) Optical axis. (2) 8 elongated holes $\varnothing 4.2 \times 10$.

Product certifications	CE
Ambient air temperature	For operation: - 25...+ 55 °C. For storage: - 40...+ 70 °C
Vibration resistance	Conforming to IEC 60068-2-6 7 gn, amplitude ± 1.5 mm (f = 10...55 Hz)
Shock resistance	Conforming to IEC 60068-2-27 30 gn, duration 11 ms
Degree of protection	Conforming to IEC 60529 IP 40, double insulation □
Connection	Screw terminals, maximum capacity: 1 x 1.5 mm²
Materials	Case: PEI (1)
Rated supply voltage	~ 24...240 V or ~ 24...48 V
Voltage limits	~ 20...264 V or ~ 20...60 V (including ripple)
Switching capacity	2000 mA (cos φ = 1), 500 mA (cos φ = 0.4) for a contact life of 1 million operating cycles at an operating rate of 1 operating cycle per second, at 250 V
Maximum voltage on output relay contacts	~ 250 V or ~ 30 V
Current consumption, no-load	≤ 30 mA
Maximum switching frequency	20 Hz
Delays	First-up: ≤ 60 ms; response: ≤ 25 ms; recovery: ≤ 25 ms
Time delay	Adjustable from 0.3 to 3 seconds

Function table	Function	Reflex system	
		No object present in the beam	Object present in the beam
Output state of relay contacts indicator: yellow LED (illuminated when relay energised)	NO	 Relay de-energised	 Relay energised

(1) PEI: high quality synthetic resin providing excellent withstand to mechanical shocks, vibration and the effects of external agents frequently encountered in industry: alcohol, salts, petroleum, oils, greases, washing agents (diluted sodium carbonate 4%, nitric acid 2%), formaldehyde vapour, splashing lactic acid, etc.

Sensing distance and operating margin

Background suppression mode

Without accessory

a: with background teaching at maximum recommended distance.
b: with background teaching at minimum recommended distance.

Example: teaching against a background located at 13.5 cm enables detection of an object at 1 to 10 cm.

(1) From white 90% to black 6%.

Diffuse mode

Without accessory

(1) White 90%. (2) Grey 18%. (3) Black 6%.

Object teaching zone

- 1 White object
- 2 Grey object
- 3 Black object

In diffuse mode, teaching of the position of the object to be detected, located between 0 and 12 cm, automatically configures the product to "background suppression" mode. This provides a constant usable sensing distance, whatever the colour of the object.

Polarised reflex mode

With reflector

- 1 With reflector XU50
- 2 With reflector XU24
- 3 With reflector XU100

Thru-beam mode

With thru-beam accessory

Nominal sensing distance. $EG \geq 2$.

Maximum sensing distance. The maximum sensing distances indicated are average values.

EG: Excess gain, operating margin.

OsiSense XU, general purpose

XUB0 Multimode function with line of sight 90° to case axis**Sensing distance and operating margin****Background suppression mode**

0,01...0,11 m max.

Without accessory

Background

a: with background teaching at maximum recommended distance.
b: with background teaching at minimum recommended distance.

Example: teaching against a background located at 13.5 cm enables detection of an object at 0 to 10 cm.

(1) From white 90% to black 6%.

Diffuse mode

0...0,3 m max.

Without accessory

(1) White 90%. (2) Grey 18%. (3) Black 6%.

Object teaching zone

In diffuse mode, teaching of the position of the object to be detected, located between 0 and 11 cm, automatically configures the product to "background suppression" mode. This provides a constant usable sensing distance, whatever the colour of the object.

- 1 White object
- 2 Grey object
- 3 Black object

Polarised reflex mode

0...4 m max.

With reflector

- 1 With reflector XU50
- 2 With reflector XU24
- 3 With reflector XU100

Thru-beam mode

0...10 m max.

With thru-beam accessory
